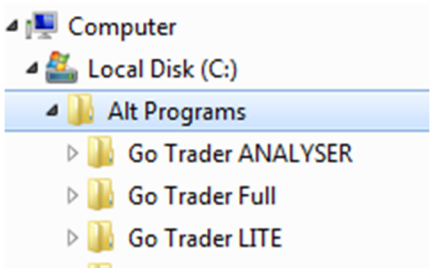
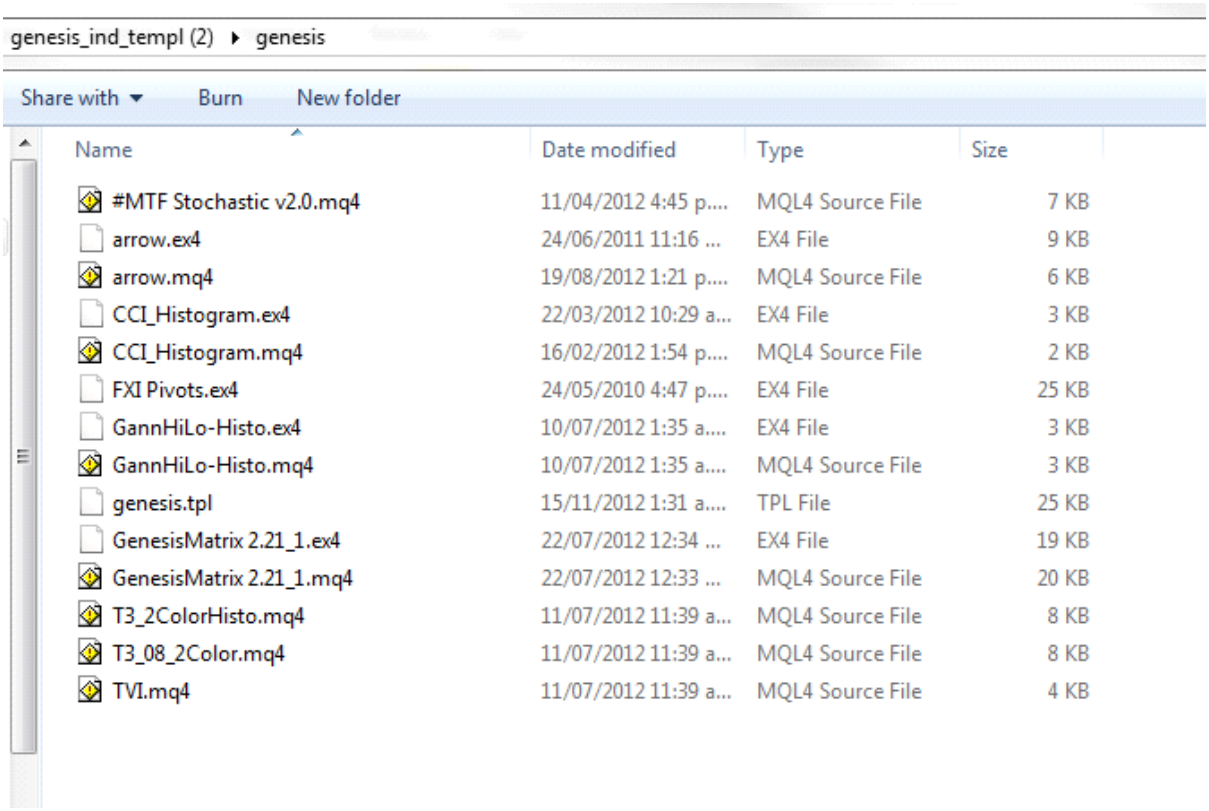
How to install the Genesis Indicators onto MT4 – by antantnz – 30/06/2013

Thread lives here : http://www.forexfactory.com/showthread.php?t=373796

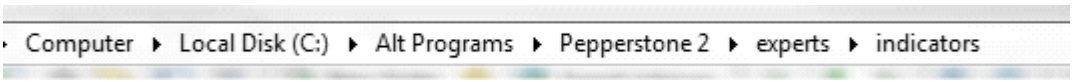
1. Make sure you have MT4 installed. If you are using Windows Vista / Windows 7 (not sure about 8), you WILL encounter permissions issues if you install it into your Program Files folder (i.e. where most programs get installed). The best advice is to create a new folder on the root of your C: drive, and then install it there. E.g.



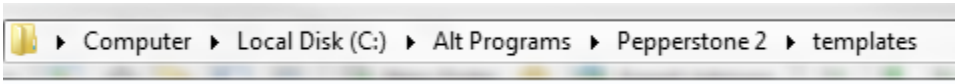
2. Download the Genesis Template to your computer, and unzip the contents to a folder. You will now have all the indicators shown below (correct as at 30/06/2013).



3. Copy all of the files (**except** the genesis.tpl) file into your <MT4>\Experts\Indicators folder.

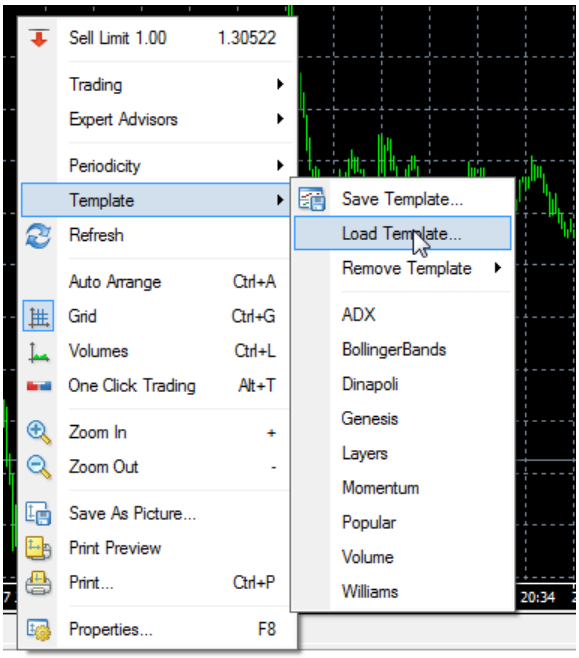


4. Copy the genesis.tpl file into your <MT4>\Templates folder (**not** the Experts\Templates folder!)



5. If you already have MT4 open, close it, and then reopen it.

6. On your chart, right click on the chart and choose Template -> Load Template -> Genesis.tpl .



7. And that's it! You now have the lovely Genesis template. Make sure you select the correct timeframe (m5) up the top and you're ready to learn more about Genesis.

8. As long as the above instructions are followed exactly, you should not experience any issues. You may wish to install some of Xaphod's indicators, these all have their own instructions already.
