

This Indicator was created by TP (fxBatman) all credit goes to him

This indicator is much like the profitcalc graphical indicator but you can set a time in history as a reference point.

It is just a development in the making but it may be useful for some to see how the pair baskets interact with one another back in history.

There are a few variable associated with this indicator and let me explain them quickly.

\*The Default indicator is set up for Non-IBFX platforms that have all of the original pairs suggested by Trader 101

### **Variables**

#### **ShortBasket:**

These are all of the pairs associated within the short basket. If you have IBFX or any other platform that does not have all original pairs, make sure to modify these for the broker of your choice.

#### **LongBasket:**

These are all of the pairs associated within the short basket. If you have IBFX or any other platform that does not have all original pairs, make sure to modify these for the broker of your choice.

#### **SymbolSuffix:**

Leave this Blank unless you have a mini account. Mini account must place a lower case m for this variable.

#### **BasketStartDate:**

This is when the indicator starts looking back in history. For example, if we are mimicking and IA that started market open for this week, we would put the market open date for this week.

#### **BasketStartTime:**

This is the time when the indicator will start looking back in history. It is linked with BasketStartDate.

#### **LotSize:**

Obviously we all know what lot size is! If your having problems with it loading on 1.0 try setting this variable to 0.1.

#### **Slip:**

This is the slippage value, don't worry about changing this variable... its used for spread calculations.
