Fine Tuning the V3M

Using the Codes to Fine Tune the db & create better set files

It all started here:

> *I just had an idea to display the number (sequence) of the filter that STOPPED the trade from happening.*
> *And if you combine that with a numbered list of filters it will give more inside info.-- HP*

Purpose and How to use:

You are looking at why the Trade was STOPPED by checking codes.

If you see a BUY or SELL on FIRST column, then SIGNAL was GO...
then...
Check the 2nd column to 'see' what STOPPED the trade from happening.

First Column: Signal Filters

The first column is the code number of **why the signal is not generated**
The column is now split in two so you can see the (stopped) BUY or SELL signal code.

First Column Filter signal codes:

> **1 - Master/Slave filter (if used)**
> **2 - Bid Ratio**
> **3 - Relative Strength**
> **4 - Buy/Sell Ratio**
> **5 - ASH 1**
> **6 - Bull/Bear Candle 1**
> **7 - ASH 2**
> **8 - Bull/Bear Candel 2**
> **9 - Previous Daily Candle Direction**
> **10 - Pips From Daily Open Direction**
> **11 - Pair GAP**

If you are seeing the satisfied Column 1 BUY and SELL appear....
then you now start looking at Column 2

Second Column: Trade Filters

The second column shows **why the trade was stopped** (even though signal was GO)
These (other) Trade filters are checked **after** the buy or sell signal is given.

2nd Column Trade filter codes:

- **1 - Halted (News,ADR,excluded)**
- **2 - Outside session**
- **3 - # Profitable baskets**
- **4 - No more lots available (money management)**
- **5 - Max Total Trades per pair**
- **6 - Max Total Trades overall**
- **7 - Max Trades per pair Per Session**
- **8 - Correlation Filter**
- **9 - NoTrade Zone around Daily Open**
- **10 - NoTrade Zones around Support/Resistance**
- **11 - Already trading different direction**
- **12 - Only Add Profit**
- **13 - Minium Pip Distance previous trade**
- **14 - Sync Index**
- **15 - Spread**

If you see too many stopped trades

You must 'Loosen' your triggers and or lower thresholds to get BUY/SELL appearing in Column 1.
Then.. **Examine your 2nd Column filters**:
If you do **not** want these to filter: You should **either** turn them to **false**
Or
Set them to a value of 0 or high enough it never will be reached.

- **Halted (News,ADR,excluded)**
- **Spread**
- **Outside session**
- **# Profitable baskets reached**
- **# Losing baskets reached**
- **No more lots available (money management)**
- **Max Total Trades per pair**
- **Max Total Trades overall**
- **Max Trades per pair Per Session**
- **Correlation Filter**
- **NoTrade Zone around Daily Open**
- **NoTrade Zones around Support/Resistance**
- **Already in opposite trade**
- **Only Add Profit**
- **Minium Pip Distance previous trade**
- **Sync Index**
