Required Risk Disclaimer:

Trading foreign exchange on margin carries a high level of risk, and may not be suitable for all investors. The high degree of leverage can work against you as well as for you. Before deciding to invest in foreign exchange you should carefully consider your investment objectives, level of experience, and risk appetite. The possibility exists that you could sustain a loss of some or all of your initial investment and therefore you should not invest money that you cannot afford to lose.

CFTC RULE 4.41 - Hypothetical performance results have many inherent limitations. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular trading program.

One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk. Variables such as the ability to adhere to a particular trading program in spite of trading losses as well as maintaining adequate liquidity are material points which can adversely affect actual real trading results.

If you are new to Forex, please trade using a demo account (not real money) until you feel comfortable. How long does it take to feel comfortable? The answer is that it varies with each person. It may take some people a few months to feel comfortable trading. Yet, for others, it may be several months. We are all unique individuals.

Please be patient and improve your trading skills. It will be very worthwhile once you are comfortable trading.

It's important to know which sessions you are comfortable trading. Perhaps you prefer one market session over another due to time, energy, etc. For example, you may be more alert and have more time to focus during the NY Session. Perhaps you only have time to trade the Asian Session or the London Session.

Each session has its own 'personality,' and you have your unique and individual personality.

Please take the time to carefully look at the detailed trading examples and 'put into practice' your newly learned skills.

Think positive! And never give up on anything in life that you have a passion to do. Nobody respects a quitter. So be patient and determined; it will work out.

The sun will shine! Believe in yourself...

Consider using a 5 digits broker. It is visually more 'fine tuned,' much easier to see, not as choppy as a 4 digits broker, and not slow and 'boring' like a 4 digits broker. If you use a 4 digits broker, you should use the higher time frames since the lower time frames are choppy. Or set up a demo with a 5 digits broker to see a more 'animated' view.

Mar. 27, 2012 @ 12:36 p.m. EST

Mar. 27, 2012 @ 12:37 p.m. EST

Opinion: Big difference visually, not as 'boring' and more pip advantage.

Today the markets were very choppy. The reason according to CNN headlines, "Stocks turn choppy on confidence report." The EURUSD and other currencies tend to correlate with the stock market, so that is the reason for the chop. Not every day is a good trading day. If the markets are choppy, walk away and check later or tomorrow. There are more good days than bad days. You will see from the screen shots in this manual that there are many good trading days and opportunities.

If the market is this choppy and you have a 4 digits broker, consider changing the FT Dominator Trend Line Signals '5' setting to '4.' It is a more sensitive setting and the yellow trend line with 'TP or See' will sometimes stretch, but you have the other trend lines and indicators to guide you with the trend. The 5' setting is great with 5 digits brokers (the '4' setting to too sensitive with 5 digits brokers).

Remember...trends go up and then retrace down. And trends go down and retrace up.

See the 'bigger' trends on the higher time frames (H1 and up, with the M15). Scalpers, use the M1 and M5 dashboards with the candlesticks, trend lines, dashboards, etc. with the M15 to grab quick pips.

**The system accurately indicated, displayed & alerted to
SELL EURUSD and BUY USDCHF. Did you take these trades?**

Screenshot taken Jan. 26, 2012

The intraday NY Session is sporadic, and trends happen in 'spurts.' It is best to not trade between noon and 2 p.m. since trends are choppy. Take a break and eat a healthy meal or snack.

There is usually a retracement @ 2 p.m. or a few minutes after that lasts for several minutes.

Whether you are a scalper or trade using the higher time frames, you clearly see on the screenshot below that when all charts are trending in the same direction, there is 'pip power.' Looking at the screenshot here and on the following page (EURUSD strong uptrend), you understand why traders say: 'the trend is your friend.'

Screenshot Jan. 26, 2012 @ 2:48 p.m. EST

When all charts are trending in the same direction, the trend is strong, and you have a great opportunity to profit. Look at how fast and hard the EURUSD dropped.

Trend at the bottom of the M5 and M15, so be prepared to take profits prior to a retracement.

All trends on all charts for EURUSD are up = strong **BUY**.
All trends on all charts for USDCHF are down= strong **SELL**.

Trends on all charts now at tops and bottoms. Trends will begin to retrace on the lower time frames. Remember, the main 'bigger' trend is up for EURUSD and down for USDCHF.

Reading this User's Manual with trading examples, you will see many examples of how trends, after retracing on the lower time frames, tend to trend back towards the top and bottom lines.

If you set up your charts similar to this visually organized layout below, you have the 'pip advantage' to see the negatively correlated currency pairs with the 'mirror images.'

Were you a 'star' trader during this session?

Fri., Jan. 27, 2012 @ 12:59 p.m. EST

The system clearly indicated, displayed & alerted to BUY EURUSD & SELL USDCHF, and when to take profits! Look at how accurate!

Look at how all charts are trending up for the EURUSD and trending down for USDCHF.
Strong trends...the trend is your friend

Trading Example: Screenshot taken Sun., Jan. 29, 2012 @ 5:24 p.m. EST
Market open: never hold a trade over the weekend. Start the week fresh.

1. Red sell zone box. Big drop down. No buy trade! The trend hit the bottom Fibi. Trend usually retraces when it hits this line. Take profits or wait to see what trend will do.

2. Nice trend down and trend still going down.

3, Trend hit top Fibi line and dropped into sell zone. See dashboard alerts.

4. Trend is in the blue buy zone box. The trend has hit the top Fibi line. Look at the top of the M15 and H1 to see the red dot, yellow star arrow, and red trend line(s) down. Sell trade using the lower time frames.

5-8 Use the 'mirror images' with the EURUSD and USDCHF to your pip advantage. In these screenshots, the 'mirror images' are nearly 100% negatively correlated.

If you do not want to sit at your computer, set the alerts on the M15 and H1.

Look at how the trend began to retrace after touching the top red lines. However, be careful! Trends often retrace back to these lines. This is how traders often get 'tricked.' No tricking you!

'Mirror' Images

Use the 'mirror' images to your pip advantage!

Trading Example

Sun., Jan. 29, 2012 @ 5:42 p.m. EST

* The trend retraced up on the M1. Scalpers using the M1, look at the M5 to grab quick pips. Be careful since the trend is down on the M15.

* Looking at the EURUSD M5: see the yellow MW Trend Line notch with display, and the light blue candlesticks with arrows. The trend bounced off of the bottom blue Fibo line. When you see the bottom blue Fibo line and the gold MW notch line, the trend usually retraces several pips. The trend is retacing up on the M5 and you see 'Bulls' from the trend line alert display. See the yellow arrows pointing to the M5 retracement up with the trend of the M1.

* Look at the EURUSD M15 candlesticks near the 20EMA line (see the aqua line). Trends often bounce off or near this line.

Note the 'M' formation at the top of the trend. When you see this formation, the trend tends to go down.

Trade Example

Sun., Jan. 29, 2012 @ 5:50 p.m. EST

* Scalpers had a nice trade up on the M1 using the M5 for trend direction. The trend had bounced off of the 20EMA line on the M15.

* Look at the nice trend down several minutes prior with the M15 and M5 on the EURUSD, and up for the USDCHF.

EURUSD M5 close up screenshot

See the blue bottom Fibon line, blue MW Trend Line with gold notch, blue candlesticks, blue trend lines and arrows. Use the M1 to enter and to take profits with the M5. This is a retracement.

Trading Example Sun., Jan. 29, 2012 @ 6:55 p.m. EST

* Trend down on the EURUSD M1, M5, M15. See the 'Bears' on the H1 and the red trend lines. Look at the dashboard alerts displays on the EURUSD M1 and M5 how it displays the white script: MW, SELL and Bears. You see the red candlesticks and red arrows. You also see the 'SELL' on the M15.

* When the trends are consistent on all charts (for example, see the trend down on the EURUSD charts, the trend tends to drop fast, so do not trade against the trend. Looking at the EURUSD charts now, you would not initiate a buy trade!

* H1 traders that prefer to trade using the alerts: Look at the blue candlesticks, blue trend lines, and trading arrows that occurred earlier. That is where you would have entered the trade. You would have closed the trade when it had touched the top red line, had the yellow star arrow and yellow 'TP or See' on the trend line. Set the alerts to receive cell text alerts. See the blue circled area on the picture to the right.

* Also note that the EURUSD and USDCHF H1 charts were nearly perfect mirror images. Idea: set alerts for both EURUSD and USDCHF to get a 'heads up' for possible trend changes in case one occurs sooner than the other.

Trading Example: Sun., Jan. 29, 2012 @ 7:16 p.m. EST

* Look at how the trends dropped hard and fast on the EURUSD and strong on the USDCHF. Always trade with the trend. You clearly see the trends with these charts, especially if you set them up like these charts.

* Trade with the trend of the M15 and up. If you are a scalper, use the M1 and M5 trends and take quick pips.

* If you cannot sit at your computer, set your many alerts for the H1 and H4, or M15. Never miss a trade!

* As you see on the screenshots, all charts in the same direction are strong trends. Use 3-4 charts to see the 'true' trend. And use the 'mirror' images to your pip advantage.

* Look at the H1 charts. Did you notice how the trend lines remained blue and red for the retracements? Keep in mind that trends on the H1 (and other charts) often trend back towards the lines a few candlesticks, and then reverse.

EURUSD H1 chart

6:55 p.m. EST screenshot

7:16 p.m. EST screenshot

Trading Example

Sun., Jan. 29, 2012 @ 7:23 p.m. EST

- * The trends continued down on the EURUSD and up on the USDCHF.
- * Look at where the yellow arrows are pointing on the M1 charts. As mentioned prior, trends often trend back to the top blue and bottom red lines a few candlesticks. This scenario occurs on all charts.
- * The EURUSD is screaming 'SELL!' USDCHF is screaming 'BUY!' Look at the profit potential here.
- * Look at the dashboard displays: EURUSD has white dashboard words and USDCHF has all lime dashboard words.
- * The trends on the M1, M15 and M15 charts are near the top blue and the bottom red Fibo lines. Let the trends run, but pay attention for a possible retracement soon.
- * You also have the MW MACD that displays trend ranges and colors that correspond to the trend direction for each time frame.

Trading Example
Sun., Jan. 29, 2012 @ 7:53 p.m.

* Trends down on the EURUSD, and up on the USDCHF.

* Very important...please pay attention...Look at the EURUSD M1 and M5. Look at how the trends bounced off of the bottom blue Fibo line, retraced a few candlesticks, and then trended back to the bottom blue lines. See the small yellow circled sections. Again, to mention that this scenario is what tricks traders. The trader thinks that the trend is going to reverse, and they 'buy,' only to see the trend go back down.

No tricking you!

* Look at how the trends went from the top red Fibo lines to the bottom blue Fibo lines for the EURUSD and vice versa for the USDCHF. See the long yellow arrows.

Trading Example
Sun., Jan. 29, 2012 @ 9:27 p.m. EST

- * Trends retraced on the M1 charts. Scalpers, use the M5 and M1 to grab quick pips.
- * Look at how the trends bounced off of the bottom blue lines, trended back to the lines, and then trended up - see M5.
- * EURUSD M15 is sideways, but still down. The candlesticks and arrows are pink (weak).
- * Look at how the EURUSD H1 trend continued down.
- * Between 9 p.m. and 9:30 p.m., the trends are often volatile and in 'limbo land,' bouncing up and down with little direction. Maybe take a break during this time. Set your alerts. At 10:30 p.m., the trend usually 'wakes up' fast.

Trading Example
Sun., Jan. 29, 2012 @ 10:28 p.m. EST

* EURUSD buy trades on the M1, M5 and M15. See the 'TP or See' on the H1 that reflect the retracements on the lower charts.

* You may begin the buy trade on the EURUSD M15 when you see blue candlesticks, three blue trend lines and dark arrows. Look at the M15 to see now the trend bounced off of the bottom blue line.

* Note the time: 10:28 p.m. As mentioned prior, trends are often in 'limbo land' between 9:00 p.m. and 9:30 p.m. EST, and 'jump' around 10:30 p.m.

* Watch the M1, M5 and M15 since the trend is still down on the H1.

* This is another TRICK for traders. You think that the trend is reversing and will continue up. The trend is trending up and you see the nice profit potential. However, pay attention. The trend is going to drop again on the EURUSD lower time frames.

Trading Examples
Sun., Jan. 29, 2012 - 10:37 p.m. to 1 a.m. EST (Jan. 30th)

* The trends are retracing on the M1 and M5, weak on the M15. You see that the H1 is still down.

* Trends went up and down on the lower charts. Trade within the pockets (see M15) using the M5 (and M1 if you prefer).

* Note how the trend dropped on the M15 after trending up for several minutes.

* Look at the timeframes. The trend is to:

1. Continue to follow the trend of the H1 with the lower time frames. You may set your alerts (cell) for the H1 if you prefer to not at your computer.
2. Scalpers may take quick pips with the M5 and M1 - see the M5 screenshot with the arrow pointing at the M1.
3. The trend is still down on the M15, but weak. M15 trader may set alerts to enter and exit trades.

Trading Example
Mon., Jan. 30, 2012 @ 1 a.m.

- * EURUSD all charts = trend is down. SELL trades. Vice versa for USDCHF = BUY trades.
- * Red zone boxes = sell zone. Blue zone boxes = buy zones.
- * The dashboard displays for EURUSD clearly scream, 'SELL!' And vice versa for USDCHF.
- * See the USDCHF M15 how the trend retraced down, and then pushed back up to the top red Fibo line. Always remember this scenario for trends on all charts.

Bottom 'W' formation on USDCHF H1

Top 'M' formation on the EURUSD H1

Trading Example

Tues., Jan. 31, 2012 @ 9:52 a.m. EST

* The charts clearly scream: 'SELL!' for EURUSD, and 'BUY!' for USDCHF.

* The time of the screenshots is @ 9:52 a.m. EST. The trends on the M1, M5 and M15 are all touching the blue bottom Fibo lines for EURUSD and top red Fibo lines for USDCHF. Pay attention...there is usually a small retracement that begins @ 10:00 a.m. - 10:07 or so and lasts for @ 15 to sometimes 30 minutes, and then turns back into the main direction. Scalpers using the lower time frames, be prepared to take profits. However, remember... the main trend is down. Look at the H1 and H4 for the 'big' direction.

* Traders using the higher time frames (H1, H4), the trend is still down and will continue down. See the following series of screenshots of 'trend behavior.' Set your alerts and send them to your cell phone as texts.

Trading Example
Tues., Jan. 31, 2012 @ 1:00 p.m. EST

* After the morning session when the London session has ended, the trends are short mini trends, spurts, like a roller coaster going up and down. If you trade using the longer time frames, you made money, so it may be best to 'call it a day,' and stop for the day.

* Scalpers using the lower time frames, go with the flow. Watch the dashboard with alerts and take quick profits.

Tues., Jan. 31, 2012 - NY session intraday

The morning session is active due to news and overlapping with the London session. In the late afternoon, the trends come in 'spurts;' up and down until the Asian session.

Do not trade from noon until 2 p.m. The London session is closed and NY brokers are out to lunch, so there is little activity. You will notice a retracement trend @ 2:00 p.m. - 2:10 p.m. EST that lasts for several minutes, and then turns back into the main trend direction.

The trend retraces on the H1 chart after the London session ends (see how the trend retraced on the H1 after it hit the bottom line). Using the M5 and M15 (with M1 to enter), you may possibly make 20+ pips with the retracement. The main trend is still down.

There is usually trend action that starts @ 3:10 p.m. - 3:30 p.m. that lasts for several minutes. Look at the M1 and M5 how the trend turned back into its main direction (down). When you see the 'TP or See' yellow on the trend line and dashboard display, take profits.

The mini trends are volatile from @ 4 p.m. EST until the Asian session. It may be best to go on with your day. Enjoy a nice walk, call a friend, run errands, etc.

The screenshots with captions are personal observations and not facts. You are responsible for your trading decisions and trading behavior.

Tues., Jan. 31, 2012 - NY session late afternoon

Trading Example
Tues., Jan. 31, 2012 @ 7:56 p.m. EST, Asian Session

Remember...trends often trend back
towards the top and bottom lines.

- * The trends turned back into the day's main direction (down).
- * As you will notice, the trends fell fast and hard for EURUSD. You have the trend candlesticks, trend lines, trading arrows, buy/sell zone boxes, dashboard alerts, etc. to trade with the trend.
- * You will see trend movement a few minutes after 7 p.m. EST, and again a few minutes after 8 p.m. EST

Trading Example
Tues., Jan. 31, 2012 @ 8:25 p.m. EST, Asian Session
AUDUSD and USDCAD

* During the late NY session and during the Asian session, you may often see nice action with AUDUSD. Pair it with USDCAD for the 'mirror images.'

* The AUDUSD is usually one pip more to trade. With nice trend moves like above, one pip is 'nothing' for the trade.

* Be careful...AUDUSD will bounce at the lines, trend back up, and trend back down like EURUSD. You will notice that EURUSD and AUDUSD often run similar.

Trading Example **Tues., Jan. 31, 2012 @ 8:55 p.m. EST - Asian session**

* EURUSD M1 scalp buy trade using the candlesticks colors, trend lines and trading arrows on the M5.

You took profits here.

* EURUSD M15 trend is down and is retracing: see yellow trend line, 'TP or See,' pink candlesticks and arrows. Trend is down on the H1, but near the bottom blue Fibi line.

* Look at the time. The retracement up on the M5 started a few minutes after 8 p.m. EST.

Trading Example
Tues., Jan. 31, 2012 @ 9:01 p.m. EST - Asian session

- * The trend on the M5 trend continued up. The M15 is retracing up.
- * The trends on all EURUSD retraced up after hitting the bottom blue Fibo line. Vice versa for USDCHF.
- * The trend is still down on the EURUSD H1 and up on the USDCHF.
- * Use the 'mirror images' currency pairs to your pip advantage.

M5 traders, you may enter a buy trade here (see the 3 trend lines, MW yellow notch, arrows, etc. using the M1).

You also see line colored dashboard words.

You see a 'Bulls' display and blue trend line on the M15.

If the charts have no direction like the charts on this screenshot, do not trade. Set your alerts or check back later.

Trading Example **Tues., Jan. 31, 2012 @ 11:00 p.m. EST - Asian session**

* Around 10:30 p.m., there is usually a 'trend pop.' This screenshot was taken @ 11 p.m. EST. If you see the trends in 'limbo land' like the screenshots above, it's best to 'call it a night,' wait until the London session @ 3 a.m. EST, or wait until the NY session in the morning.

* See if AUDUSD has movement.

* The only movement on the charts is USDCHF. The EURUSD H1 is sideways, the M15 is not moving, the M5 and M1 are up and down.

Trading Example
Wed., Feb. 1, 2012 @ 2:43 p.m. EST
Trading with longer time frames

* If you prefer to trade using the longer time frames, you may enter trades using the lower time frames, such as M5, to get a better entry.

* The EURUSD is no longer getting 'beat up,' and had a great trend up on the H1 (and H4).

* As mentioned prior, when the trend hits the red Fibo line and the blue bottom Fibo line, there is usually a nice retracement trade using the lower charts. As you see on the screenshots, the M5 had dropped several pips with the H1 retracement (see the H1 red candlesticks, arrows, red trend lines, etc.)

* As mentioned prior, be prepared for the trend to possibly trend back towards the top red line.

Remember -->

* Set your alerts for the longer time frames. The instructions are in the beginning of the User's Manual. Simply scroll to 'true' in the Inputs section of the indicator. You must set up the SMTP forwarding to receive alerts. We have provided you with step-by-step instructions. If you ever change your password for your email with your SMTP, you must input the new password into Metatrader, and then close and restart Metatrader.

GBPUSD had a nice trend down earlier, and now has a nice trend up on the M15. Look at the candlestick color on the H1 (see 'Bulls') along with the lower time frames. This M15 trade is over 30 pips profit potential! GBPUSD can be volatile. The EURUSD and AUDUSD may be better choices to trade.

GBP traders... 'pig' profits!

Feb. 10, 2012, intraday EST

The Pound can be a 'nasty beast' to trade. Look at how the system guides you to trade with the 'beast' rather than be 'conquered' by it.

Trading Example **Mon., Feb. 13, 2012 @ 8:38 p.m. EST - Asian Session**

Why show the AUDUSD? The AUDUSD tends to get good movement during the Asian Session. 'Loonie' USDCAD may be 'Money,' if trading with the trend.

The AUDUSD trend was down on all charts. Strong trend down that clearly displayed & screamed: **SELL!**

Look at the buy/sell zones boxes colors, trend candlesticks colors, trend lines, trading arrows, dashboard alerts, etc. to trade and profit. You see that when there is trend consistency on all charts, the trend is strong and has great profit potential.

Not you!

**"The trend never tricked me!
I knew the trend was down."**

Trading Example
Tues., Feb. 14, 2012 @ 9:50 a.m. EST

EURUSD:

M1, M5 buy trade using the candlesticks, arrows and trend lines of the M15 (see the small circled area within the larger circle). You see the MW Trend Line gold notch, the area where the trend usually begins to turn. The H1 trend is down, so grab quick pips.

The M5 is at the top red line and the M15 is at the 20EMA, so be prepared to take profits with the M5.

Use the correlation set up to your trading advantage. Look at the 'mirror' images.

Trading Example
Tues., Feb. 14, 2012 @ 10:15 a.m. EST

M1 choppy. M5 weak retracement up. M15 is sideways. H1 still down and strong.
See the red candlesticks, red trend lines, red arrows and red sell zone box on the H1.

As noted, there is usually a small retracement that occurs a few minutes after 10 a.m. EST that lasts for a number of minutes, and then usually continues in the main direction (see H1). This is an observation and not a fact. See the following screenshots to see how the EURUSD trend continued down.

If you are a scalper, take quick pips until you see trend direction. If you are a H1 and up trader, you see that the trend is still down.

Look at the M1, M5 and M15. Sometimes it is best to 'sit on your hands' and wait for trend direction.

Did you take these great trades on Valentine's Day?

Screenshot taken Feb. 14, 2012 @ 1:06 p.m. EST

Our color coordinated, accurate indicators and dashboard displays keep you trading with the trend. Scalpers have the opportunity to grab quick pips with retracements, and traders that prefer to trade the longer time frames have the opportunity to grab many pips and close trades with text alerts!

All charts EURUSD downtrends. Vice versa for USDCHF. When all charts have trends the same direction, the trends are usually strong.

As mentioned repeatedly in this User's Manual, consider organizing your platform charts like the layout here to have a 'visual balance' and boost your 'pip advantage' using these 'mirror images.'

H1 and H4 traders, did you take these
great, profitable sell trades
on Valentine's Day?

Screenshot taken on Feb. 14, 2012 @ 7:29 p.m. EST

**Traders using the longer time frames, you have alerts to enter
and exit trades accurately and timely. Send the alerts
to your cell phone!**

Trading Example
Thurs., Feb. 16, 2012 @ 9 a.m. EST

* Look at all the charts. M1, M5 and M15 up in the blue buy zone boxes. There's no guessing...it's a great buy trade. Look at the H1 candlestick sitting on the 'MW' gold line with an arrow. The candlestick bounced off of the blue bottom Fibo line. You had the yellow star arrow to 'warn' you of a possible trend change. However, the trend is still down. Enter the trade with the lower time frames.

* And using the USDCHF 'mirror' image to your trading advantage.

* See the following screenshots to see how the trends progressed.

* Keep in mind that trends retrace, going up and down on the lower time frames. If you have no patience, trade using the higher time frames like H1 and H4, using the alerts. Which indicators have alerts?

Choose the alerts you prefer:

FT Dominator Trend Line Signals, FT Dominator Trade Signals Arrows, Trend and Fibo Alerts (the yellow star arrow), FT Dominator MW Trend Line Signals and FT Dominator Auto Fibo Pivots Top and Bottom Pivots, You will not miss a beat!

Trading Example
Thurs., Feb. 16, 2012 @ 10:02 a.m. EST

* All charts EURUSD are in the blue zone boxes. See all the lime dashboard alerts. Use the lower time frames with the H1. The H1 does not say 'BUY' yet since the trend has not yet met the conditions. You see the lime 'MW' and 'Bulls' dashboard words. Enter a BUY trade using the M5 and M15. Set your alerts.

Trading Example
Thurs., Feb. 16, 2012 @ 10:28 a.m. EST

*** EURUSD is strong BUY TRADES on ALL CHARTS. Remember, 'the trend is your friend.'**

WOW!!!

Trading Example

Thurs., Feb. 16, 2012 @ 11:11 a.m. EST

* The EURUSD trend is UP, but RETRACING. Trends usually retrace about this time.

* M1 scalpers, make it quick if you choose to scalp sell trade. The M5 and M15 display 'Bears' to show this retracement. Remember...the trend is UP. Look at the M15 and H1.

* The retracements often 'trick' traders into thinking that the 'party is over' with the trend. Not you!

Trading Example Thurs., Feb. 16 @ 11:52 a.m. EST

* The trend is retracing on the M1. The M5 displays 'Bears' to reflect this retracement. You see that the M5 trend bounced off of the top red Fibo line.

* The EURUSD trend is still UP on the M5, M15, H1 and has a dark candlestick, blue trend line and 'Bulls' display on the H4 (see the screenshot below). H4 trader, use the H1 trend with the lower time frames to enter. Set your alerts. Make it simple and send the alerts to your cell phone.

* You clearly see that trading WITH the trend may be profitable.

Use the correlation pairs to your trading advantage! Look at how the EURUSD and USDCHF are nearly perfect 'mirror' images.

Trading Example

Thurs., Feb. 16, 2012 @ 1:04 p.m. EST

* The trends on the lower time frames retraced down (choppy). Look at the M5 and M15 to see the weak retracement down.

* At this time of day, you will fall asleep sitting at your computer. If you are 'pip content,' close your H1 trade and enjoy your day. Otherwise, set your H4 alerts.

* Remember about the trend trending back towards the upper and lower lines? Look at the screenshots below. The H1 trend became stronger and then weaker. A turtle walks faster than the trend movement now.

Trading Examples
Feb. 16, 2012 in the afternoon EST
Stop now and enjoy the day. The trends are volatile and 'snap'

Thurs., Feb. 16, 2012 @ 1:50 p.m. EST

If you are a scalper, take quick pips using the M1 and M5 with the candlesticks, trend lines and arrows of the M15. The M15 retracement is weak (see the pink). The H1 trend is up. The mini trends now will go up and down like a yo-yo. Look at the time prior to entering a trade. Retracements tend to occur around the hour, half hour. The trend will continue in the main direction = UP (see H1).

Again to mention...if you are 'pip content,' stop and enjoy your day. The trends are going to be volatile going up, down and sideways until the Asian Market opens. And if you do trade the Asian Market, you know the 'trend tricks.'

Trading Example
Thurs., Feb. 16 @ 3:08 p.m. EST
AUDUSD

* AUDUSD had a great trend up in the early session. The trend is now retracing.

* Consider trading AUDUSD in the late afternoon EST and Asian Session since it tends to have movement.

* The trend is still up on the H1. The trend is retracing. Be careful...sometimes when the trends retrace on the M15, the M5 drops fast. See the screenshot below.

Trading Examples

Thurs., Feb. 16, 2012 late afternoon EST

AUDUSD trending up again Feb. 16 @ 3:42 p.m., and sideways on the M15. It's best to walk away...unless you are a scalper.

AUDUSD now retracing down...

EURUSD up and down like a yo-yo. It's best to walk away. The trends are in 'limbo land.'

From @ 4p.m. EST until the Asian Session

There is NO trend direction this time of day. The best trading during the daytime is in the morning when the NY Session overlaps with the London Session.

As you clearly saw looking at the screenshots, the afternoon trends are up and down like a roller coaster.

What to do? Take a walk, eat a meal, call a friend, etc. Set your alerts for the M15 or H1. Wait for the Asian Session. The market wakes up @ 6 p.m. EST, and has decent movement after 7 p.m. until @ 9 p.m. EST, when it becomes choppy. The market is usually very choppy between 9 p.m. EST until @ 10:15 p.m.

Otherwise, tomorrow is a new day...

Trading Example

Thurs. Feb. 16, 2012 @ 10:34 p.m. EST - Asian Session

* The market was slow, and then dropped @ 10:30 p.m. EST. As mentioned, it is our observation that a brief trend 'pop' often occurs about this time.

* You may begin a sell trade using the candlesticks colors, trend lines, trading arrows of the M15 with the M1 and M5. You see the yellow star arrows (Trend and Fibo Alerts) on the charts, which is usually the start of a retracement or reversal.

* The H1 trend has bounced off of the top red Fibo line and has the yellow star arrow. The trend trended back towards the top line (you know the 'trick') and is retracing down. The trend is weak (see 'TP or See' dashboard and pink arrow). Trade using the M5 and M15, and the M1 for entry. Be careful...the trend tends to 'pop' up after hitting the top & bottom lines. Take profits with the M5.

* Watch the M5 (and M1) charts during the Asian Session. You will often see the trend go from one Fibo line to the other. Look at the next screenshot.

Trading Example

Thurs., Feb. 16, 2012 @ 11:32 p.m. EST - Asian Session

* The EURUSD trends on the M1 and M5 trended up and then dropped. Look at the H1 how the dashboard displays 'Bears' and 'MW' in white, and the trend lines are red. The trend is weak (see pink arrow) and sideways.

* Look at how the trends bounced off of the top red Fibi lines and the bottom blue Fibi lines. Look at the M1 and M5.

* Look at the H1 top red Fibi line. The yellow star arrow and large red dot, and trend touched the top line when the EURUSD was 1.31580. The 'MW' white dashboard alert has displayed since. The EURUSD is now @ 1.31285, which is -30 pips. (This is a 5 digits broker).

* The trends went up and down on the lower time frames. Then the trend became stagnant, not moving. If the trend is stagnant, 'call it a night' and watch a good show on television. Or, wait until midnight to see if there is action.

Trading Example

Fri., Feb. 17, 2012 @ 10:17 a.m. EST

The EURUSD dropped. Look at the M1, M5 and M15. The system displayed 'TP or See' for the H1, and it shows the drop with the pink candlestick. See the yellow star arrow also.

Remember this last night (see the yellow arrow on the left)? The trend pushed back up, dropped fast, and continued down.

The H1 clearly shows the 'bigger' trend here. Look at how all charts show the downtrend. This is trend 'pip power' and 'profit power.'

The M1 and M5 are scalpers charts. Always follow the trends. Scalpers, use the candlesticks, trend lines, trading arrows, buy sell zone boxes, dashboards, etc. to take quick profits. H1 and up traders, you have alerts if you prefer to step away and not 'babysit' your trades.

Never be tricked by the trends again!

'Freaky Fridays' are not 'freaky' for you!

NY Session - Fri., Mar. 9, 2012

Screenshot @ 8:56 a.m. EST. Great sell trades. Trend dropped fast and continued to drop.

Screenshot @ 9:48 a.m. Fast M1 scalp trade. Take quick profits.

Screenshot @ 9:58 a.m. Trend continued to drop.

Screenshot @ 2:43 p.m. Trend retraced up starting @ 2 p.m.

Fri., Mar. 9th @ market close. Trend continued to retrace up.
