U.S. Government Required Disclaimer - Commodity Futures Trading

Commission Futures and Options trading has large potential rewards, but also large potential risks. You must be aware of the risks and be willing to accept them in order to invest in the futures and options markets. Don't trade with money you can't afford to lose. This is neither a solicitation nor an offer to Buy/Sell futures or options. No representation is being made that any account will or is likely to achieve profits or losses similar to those discussed on this website. The past performance of any trading software or methodology is not necessarily indicative of future results.

CFTC RULE 4.41 - HYPOTHETICAL OR SIMULATED PERFORMANCE RESULTS HAVE CERTAIN LIMITATIONS. UNLIKE AN ACTUAL PERFORMANCE RECORD, SIMULATED RESULTS DO NOT REPRESENT ACTUAL TRADING. ALSO, SINCE THE TRADES HAVE NOT BEEN EXECUTED, THE RESULTS MAY HAVE UNDER-OR-OVER COMPENSATED FOR THE IMPACT, IF ANY, OF CERTAIN MARKET FACTORS, SUCH AS LACK OF LIQUIDITY. SIMULATED TRADING PROGRAMS IN GENERAL ARE ALSO SUBJECT TO THE FACT THAT THEY ARE DESIGNED WITH THE BENEFIT OF HINDSIGHT. NO REPRESENTATION IS BEING MADE THAT ANY ACCOUNT WILL OR IS LIKELY TO ACHIEVE PROFIT OR LOSSES SIMILAR TO THOSE SHOWN.

No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. In fact, there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular trading program. Hypothetical trading does not involve financial risk, and no hypothetical trading record can completely account for the impact of financial risk in actual trading. All information on this website or any e-book purchased from this website is for educational purposes only and is not intended to provide financial advice. Introduction

Thank you for your purchase of "Ultimate Pro Scalper"!

Ultimate Pro Scalper software package includes:

- Step-by-step users guide
- Indicator's secret trading algorithm explained in detail
- Ultimate Pro Scalper indicator software itself
- Live Actions Screenshots
- Sample Trades examples
- Personal "I will help you" promise from the developer

Ultimate Pro Scalper is an amazingly easy to use buy/sell scalping indicator. All you have to do is follow simple signals displayed on your trading chart. UPS will also generate a pop-up sound and email alerts whenever a new entry signal is issued. On top of that, it also has a built-in smart informer system that shows some very helpful information to assist you in your trading. Details on all these can be found in this guide you are reading now. Good luck and happy trading!

It's extremely important for you to fully understand how Ultimate Pro Scalper works. Read this guide carefully, it has a lot of important information that could greatly improve your trading experience.

WE UNDERSTAND YOUR NEEDS
If you are not 100% satisfied, we will
refund your money. No questions asked.
We have your best interest
and we will not let anyone steal it.

Please try using the indicator on a demo account first. Only move to trading with it on a live account, once you are completely familiar with Ultimate Pro Scalper and fully understand all the simple rules on how to use it correctly.

Do not hesitate to contact us if you have any questions!

We wish you a great trading success!

Installing the Indicator

IMPORTANT: Make sure to **update your MT4** to the latest build (build 600). Ultimate Pro Scalper is designed to give you best results and to work properly only with the latest version of MT4 platform.

If you don't have MetaTrader ® installed,
please download it from this link:
http://www.alpari.co.uk/files/site_uk/000software/MT4_set_up.exe

Follow the instructions and open a demo or real account. We recommend trading the indicators on demo account before proceeding to real accounts.

Unzip the zip file that you have downloaded:
The indicator file is **UltimateProScalper.ex4**

MT4 Build 600 installation instructions:

Step 1:

- 1) Open your MT4 platform
- 2) Click File — Open Data Folder. Here you will find a folder called MQL4, this is the new "home" for all your .ex4 or .mq4 files you have
- 3) Open folder MQL4. Here you will find Indicators folder. Copy your Indicator (ex4 or .mq4) files into MQL4/Indicators folder. Do this by right clicking on the file and clicking "copy" and then "paste".

Disclaimer: This is not financial advice.
We are neither Expert Advisor and Trading system.
We are updated manually.
We are not responsible for any losses.

We are not responsible for any losses.
We are not responsible for any losses.
We are not responsible for any losses.
We are not responsible for any losses.

4) Restart your MT4.

If you have any difficulties, please contact our technical support and we will help you as soon as possible.

Step 2: Open the MetaTrader® platform, and click on View -> Navigator.

You can also press CTRL+N.

Click on 'Navigator'

Step 3: A window titled 'Navigator' will appear. Next, click on Custom Indicators.

Step 4: You should see the **UltimateProScalper** in the Custom Indicators folder. Double click on the Ultimate Pro Scalper file and click OK to load it onto your chart.

If you need any assistance, please contact our technical support team.
Our email is: karl@karldittmann.com

Informer

UltimateProScalper has been enhanced with a smart informer system, which is designed to make your trading more pleasant and convenient.

```
UltimateProScalper
Pair: GBPUSD
Timeframe: M5
Last Signal: SELL
Trend Power: 62%
Next Candle in: 2M 44S
```

The informer shows the name of the indicator, current pair and timeframe, last generated signal, probability (strength of the trend) and the time left until next candle appears.

MUST READ RULES on how to use the signals

Important Rule #1:

Do not use the indicator on a flat market! Use the indicator ONLY at active market hours – for example London session, US session.

Trend will not be noticeable on a weak market (night time, Christmas period, other holidays etc...) keep reading and I will explain everything ...

Important Rule #2:

- Identify a current trend. (Remember? Trend is your friend?)
 - Ignore all signals against a current GLOBAL trend!
 - Try using the informer to find out how strong the current trend is.
- Example:

Trend is up – but you get a “sell” signal
(Ignore it and wait for a “buy” signal to enter)

This is the most important rule, if you follow it you will have almost no losing trades at all.

Important Rule #3:

The next highly important rule: Do not trade and do not use the indicator on a sideways trend. This is a “MUST follow” rule.

If you DON'T follow or ignore the rules above – good results are NOT guaranteed!

with the best and most advanced indicators.

Stop Loss

Place your stop loss according to the popup alert SL.
In most trades stop loss is calculated with this formula:
Previous bar high or low – extra number of pips.

You can adjust the SL extra number of pips in the indicator INPUTS.

IMPORTANT: Set stop loss for ALL your trades and DO NOT deviate from it.
Once the trade has touched your stop loss, be disciplined and close the trade.
This will protect you from major capital losses.

Entering Trades

Green symbol, as shown on the screenshot to your left, is the signal to enter with Buy.

Red symbol, as you can see on the screenshot to your right, is our signal to enter with Sell.

Exiting Trades

Option 1

Exit your trades when the BuySellForexSecret issues the opposite trading signal. This ensures that you trade with maximum profits and exit right before the market is expected to reverse.

If you enter on a **buy** signal (**green**)

- exit as soon as a sell signal is generated (**red**).

If you enter on a **sell** signal (**red**)

- exit as soon as a buy signal is generated (**buy**).

Option 2

Exit trades according to the popup alert TP number.

Remark: You can adjust TP and SL levels depending on your trading style. This can be done in the indicator inputs.

Option 3

Another exit mechanism which is highly effective is to exit near strong support or resistance levels. It is a method that generates exits earlier, so you take profits early.

Time Frames and Pairs

- 1 min and 5 min
 - All major pairs.
- Works best with GBP/JPY, EUR/USD, GBP/USD and USD/JPY

Signal Popup Alert Window:

Buy/Sell signal price - current entry price

TakeProfit - take profit level

StopLoss - stop loss level

X minutes chart - timeframe

Input Parameters:

App 4 | Common | **Inputs** | Colors | Visualizations

Variable	Value
PeriodValue	10
SL_add_pips	100
TP	100
UseAlerts	true
EmailAlerts	true
CORNER	0

OK Cancel Help

**All the inputs are ready to use/trade by default.
You don't have to change anything.**

If you wish you may change the sound (**UseAlerts**) and email (**EmailAlerts**) alerts to true/false.

The most important indicator input is **PeriodValue**. I highly recommend you **DO NOT** change these settings, as they work based on a very complicated specially adjusted trading strategy.

If you still decide to adjust the period, you can try using PeriodValue: 10-25 and see which one suits your trading style the most.

Important: when trying new period value, use it on demo account first and see how the signals change. Be careful when testing new values and remember to test them on demo first!

Stop Loss and Take Profit (SL_add_pips and TP) – preset extra number will be added to the previous bar high or low and displayed in your popup alert. I also highly recommend to use the default values for SL and TP, however you can change them according to your personal preference.

In the very bottom of the input parameters, below the color settings, you can find an input called **CORNER**. By default it's set to 0. This input is responsible for moving the info box in any of the corners of your trading chart. 0 - upper left corner, 1 - upper right corner, 2 bottom left corner and 3 bottom right corner. It's useful to change this input when the info box is coming on top of the price and makes the signals hardly visible.

EMAIL alert setup:

Setup your metatrader4 to send email:

Email alert is already activated in the Ultimate Pro Scalper INPUTS, all you have to do is setup your own mail server info...

Email setup can be done in: Tools => Options => Email

If you need more info on how to setup an email alert, go to youtube.com and search for "mt4 email setup" there are plenty of free video samples.

Recommendations

Try to use the indicator ONLY during ACTIVE market!

Do not use the indicator on a weak/slow market – outside recommended trading hours (London or US sessions). Signals never work well on a weak market; this has been proven many times...

The London session is the largest market and it opens at 8.00 GMT or 3AM EST and closes at 17.00 GMT or 12 PM EST.

Trading is best between 8.00am GMT and 10am GMT

The New York session opens at 13.00 GMT or 8 AM EST and closes at 22.00 GMT or 5 PM EST.

The best trades occur in the first 2-3 hours.

IMPORTANT: It is extremely important to trade only following the current trend! It will cut ALL bad trades! Never place a trade against a trend.

Traders in London: Fx-Tools.net
Best Market Expert Advisor and Trading System
and our updates contact email:
fxtradingupdate@gmail.com

Be smart! Download the indicator
on your account with an independent terminal
or email: fxtradingupdate@gmail.com
and our updates contact email:
fxtradingupdate@gmail.com

Example:

If the current trend is up and the indicator shows "BUY" signal – place a trade.

If the current trend is up and the indicator shows "SELL" signal – NO TRADE! Wait for the next "BUY" signal...

Stay away from using the signals and open trades on unclear trends or sideways trends – example:

Money Management

Money management is a very important concept that has an enormous effect on draw downs and margin calls. The cardinal rule of money management is the following:

You should only risk 1-3% of your account on any single trade.

You may have heard this rule a hundred times before, but it is amazing to see how many good traders fail to comprehend this concept – and don't understand why they are wiped out again and again, despite great entries and timing of trades.

Another important concept that is related to your **stop loss**:
In this strategy you learned how to place a stop loss for each setup.

This stop loss is calculated regardless of your level of risk or your equity, and is based solely on price-action. After a stop loss is set, calculate your trade size so you achieve the right percent of risk for your trades.

For example: your stop loss is 10 pips, and your equity is 10,000\$, you wish to risk 2% of your equity in this trade, so you enter a trade with 2 lots – so your risk is 200\$, or 2%.
