1. Select File->Open Data Folder
2. Open MQL4/files/fxrules folder to display the configuration files. There should be one named for your currency pair, such as

1. Open the text file in your favorite editor.
2. This a full-featured template that is a good starting position for a trading plan. The template contains:
 - a. Plan management rules to control profit and loss for the overall plan
 - b. Trailing stops
 - c. Automatic order stop and take profit settings from ATR calculations
 - d. Automatic order sizing from risk management settings (preset at 1% of available margin).
3. To use this plan simply replace the highlighted rules (retaining the R:01, and R:02,) with alternate qualifiers. Use the accompanying Samples guide as a starting place.
4. Alternatively, you can delete this text and create or copy a new trading plan.
5. Save changes

1. To force fxRulesEngine to read your new plan, switch timeframes between 5 minutes and 1 minute, for example.

1. So how well did it go? You can log fxRulesEngine by adjusting logging in Properties as well as exporting the results to a CSV text file that can be imported into Excel.
2. The results are stored in the fxrules folder.
