

Dear Traders,

At last after countless days and untold amounts of time I have created what I feel is my finest work in my 7 years in forex. With the help of Robdee and his superior MT4 skills whom has created the fine layout of these charts and programming 8 indicators into 1 super efficient alert system **vForce** has reached its launch stage. The charts below will tell all as Rob and I attempt to take all traders on the ride of a lifetime turning a seemingly difficult and wild market and taming it into a super efficient profit making machine.

### **System Introduction**

Time frame is 15min pair is Eur/Usd (EU)

#### **Indicators**

Rate of change

MACD

Bollinger Bands

Bulls Power

Bears Power

ADX

RSI

Stochastics.

All the indicators are programmed into 1 alert indicator called "vForceAlerts". When vForceAlerts is loaded into your MT4 you will only see painted candles on your chart. The indicators are working behind the scenes. Please read on for more information.

This may seem like overkill but everything is simplified into three colors as you will notice below. The system was created to fulfill my need to help others break their way into the Forex market. For me theres no point in selling something like this when I can give it away and put a smile on the face of traders facing the struggle of financial independence. Of course Rob feels the same way. Im not going to bore you all with my with a huge block of text here.

### **THE SYSTEM**

**\*All trades are signaled by an alert system\***

**Go Short** (you will hear the alert)

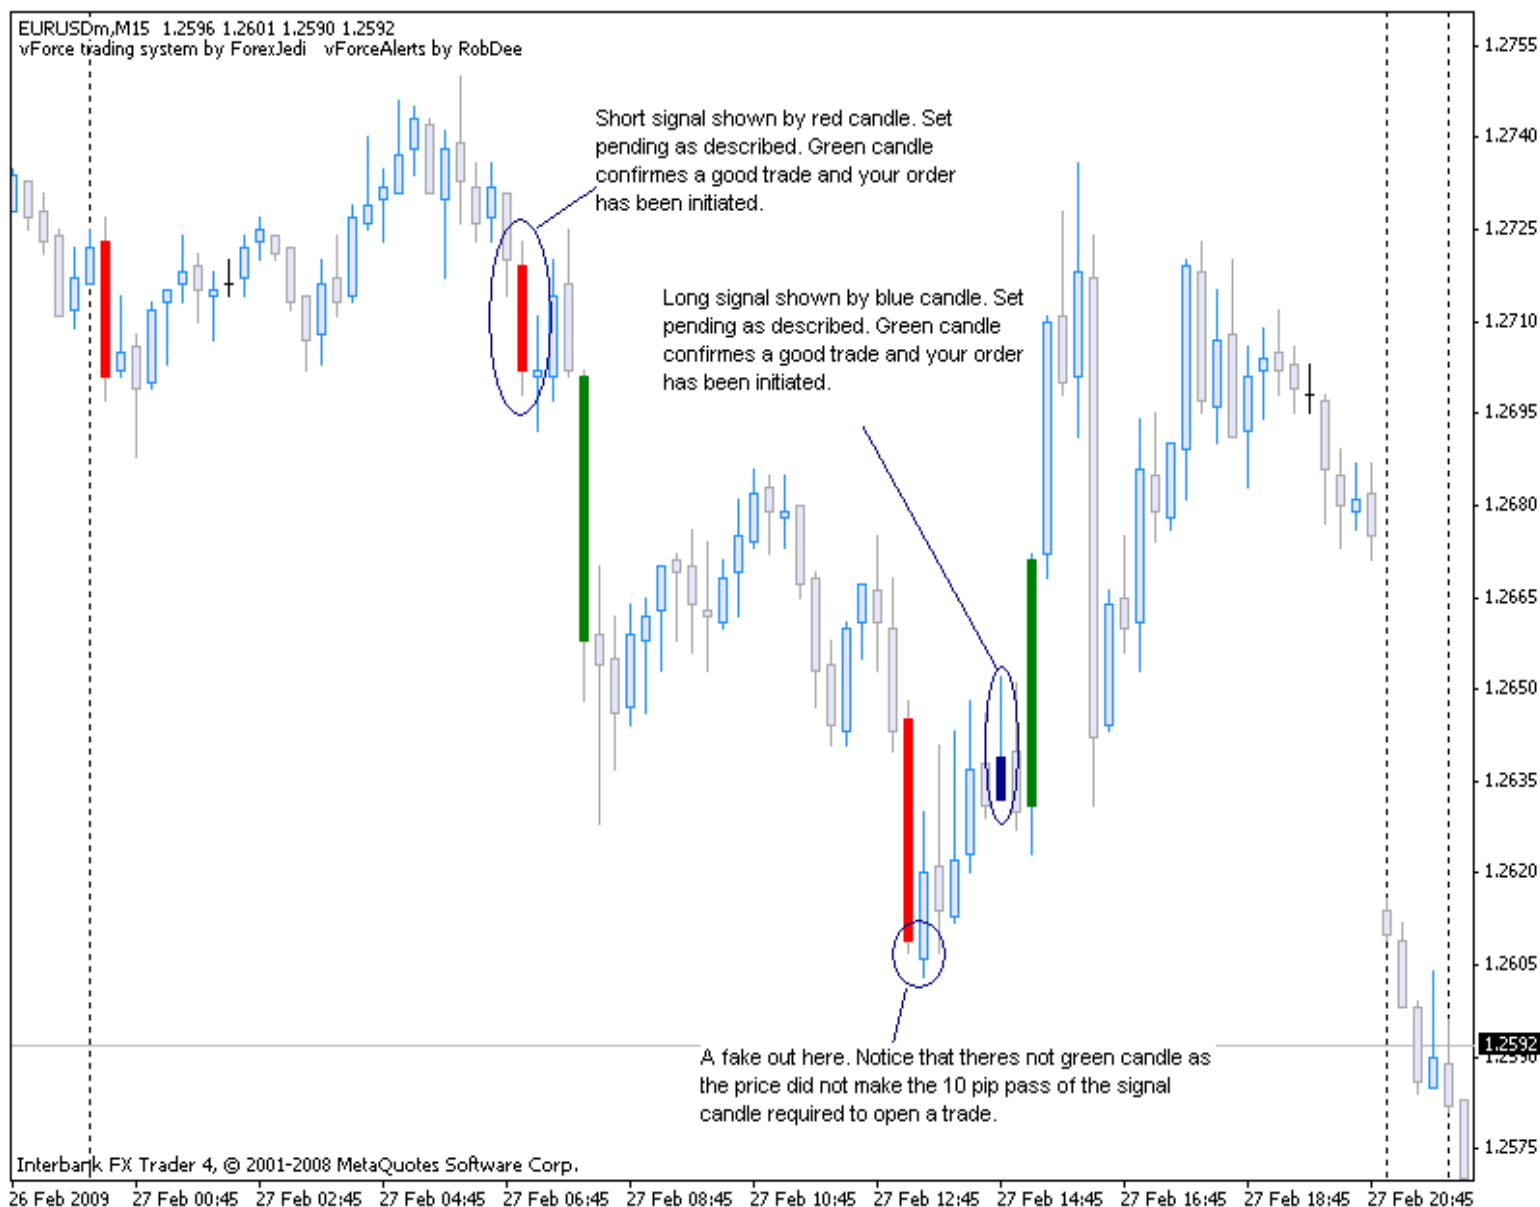

When a **red** candle appears place a pending order 10pips from the low of the **red** candle and a stop 10 pips above the **red** candle and a trail stop of 50 pips. Take 80% profit at 20 pips and let the rest ride till

stopped out. **Note that a green is the candle that your trade has been initiated.** If your trade has not initiated within 4 candles close the pending order and wait for the next signal.

### Go Long (you will hear the alert)

When a **blue** candle appears place a pending order 12pips from the high of the **blue** candle and a stop 10 pips below the **blue** candle and a trail stop of 50 pips. Take 80% profit at 20 pips and let the rest ride till stopped out. **Note that a green is the candle that your trade has been initiated.** If your trade has not initiated within 4 candles close the pending order and wait for the next signal.

### Chart Example

## **Indicator and Template instructions**

Everyone will be able to choose from 1 of 2 templates. 1 is white and 1 is black. There is only 1 indicator titled “vForceAlerts” The templates and the indicator are located in the template and indicator folder where you found this document.

### **Step 1**

Save the indicator to C:\Program Files\Interbank FX Trader 4\experts\indicators

### **Step 2**

Save the templates (both of them) to C:\Program Files\Interbank FX Trader 4\templates

### **Step 3**

Close your MT4 and restart it. Load a new 15min chart. Right click on the chart and load a template. They are titled vforcealerts\_white and vforcealerts\_black.

Your all set, good trading to all
