

Double bottom and double tops

Components on chart.

20 sma or ema.

5/20 sma cross over alert.

Fractal's to see double bottoms/double better.

Using the 20 sma/ema ...15min chart

Holding trades to targets after entry with the price running above or below the yellow moving average

Seeing the trade

Look for DT/DB in the important fib areas, such as 23.6/38.2/61.8.. Higher low in price or lower high also. Add to trades to maximise profits. Losses will much smaller then wins, adr is hit most day's and when direction is right you can make pips!

Targeting the 200%.. double bottom marked with pink dots, 3 legs in this move..(use fractals to see it clearly)

And then in reverse.. once 200 % reached on long side.

Crude oil good for DT/DB's

Gbp cad, look to trade off good area off S/R.

Example trades.

Nzdusd/..

Profits add up when you add on pullback's and maximise the run to adr or the 200%
