## Trading The 15 Minute Charts

Here is a EUR/USD 15 Minutes Chart that is Ranging and I will now show you how to trade the Ranging Market. You can trade any Pair you like. You will get similar results. All you have to do is take 10 pips Profit and exit. You will get 4 to 10 entries per day so exiting with 10 pips only after each trade will give you 40 to 100 pips per day.

Here is the EUR/USD 15 Min Chart: Notice how many Entries you get.

A) At 'a' we see that the CCI is going above the 50 level.

B) At 'b' we get the Buy Arrow. We Buy at the open of the next candle and make 10 pips profit.

C) At 'c' we also get the ZWINNER Colour Signal changing colour to Aqua, giving us Buy Signal.

D) At 'd' we get another Buy Arrow. We Buy at the open of the next candle and soon we get stopped out, and lose 23 pips.

Please note: We could have avoided this trade as the ZWINNER Colour Signal is in Red colour, telling us the current trend is down. This is a good example for you to learn how to avoid False Signals.

E) At 'e' we get one more Buy Arrow. The CCI is above the 50 Level and also the ZWINNER Colour Signal is in Aqua colour, so we go long and quickly make 10 pips Profit.

F-G) At 'f' we get a Sell Arrow and then the CCI goes below the 50 Level at 'g'. The Trend indicator is also down and the Colour Signal is also Red, giving us Sell Signals from all over. So we go short and get

another 10 pips

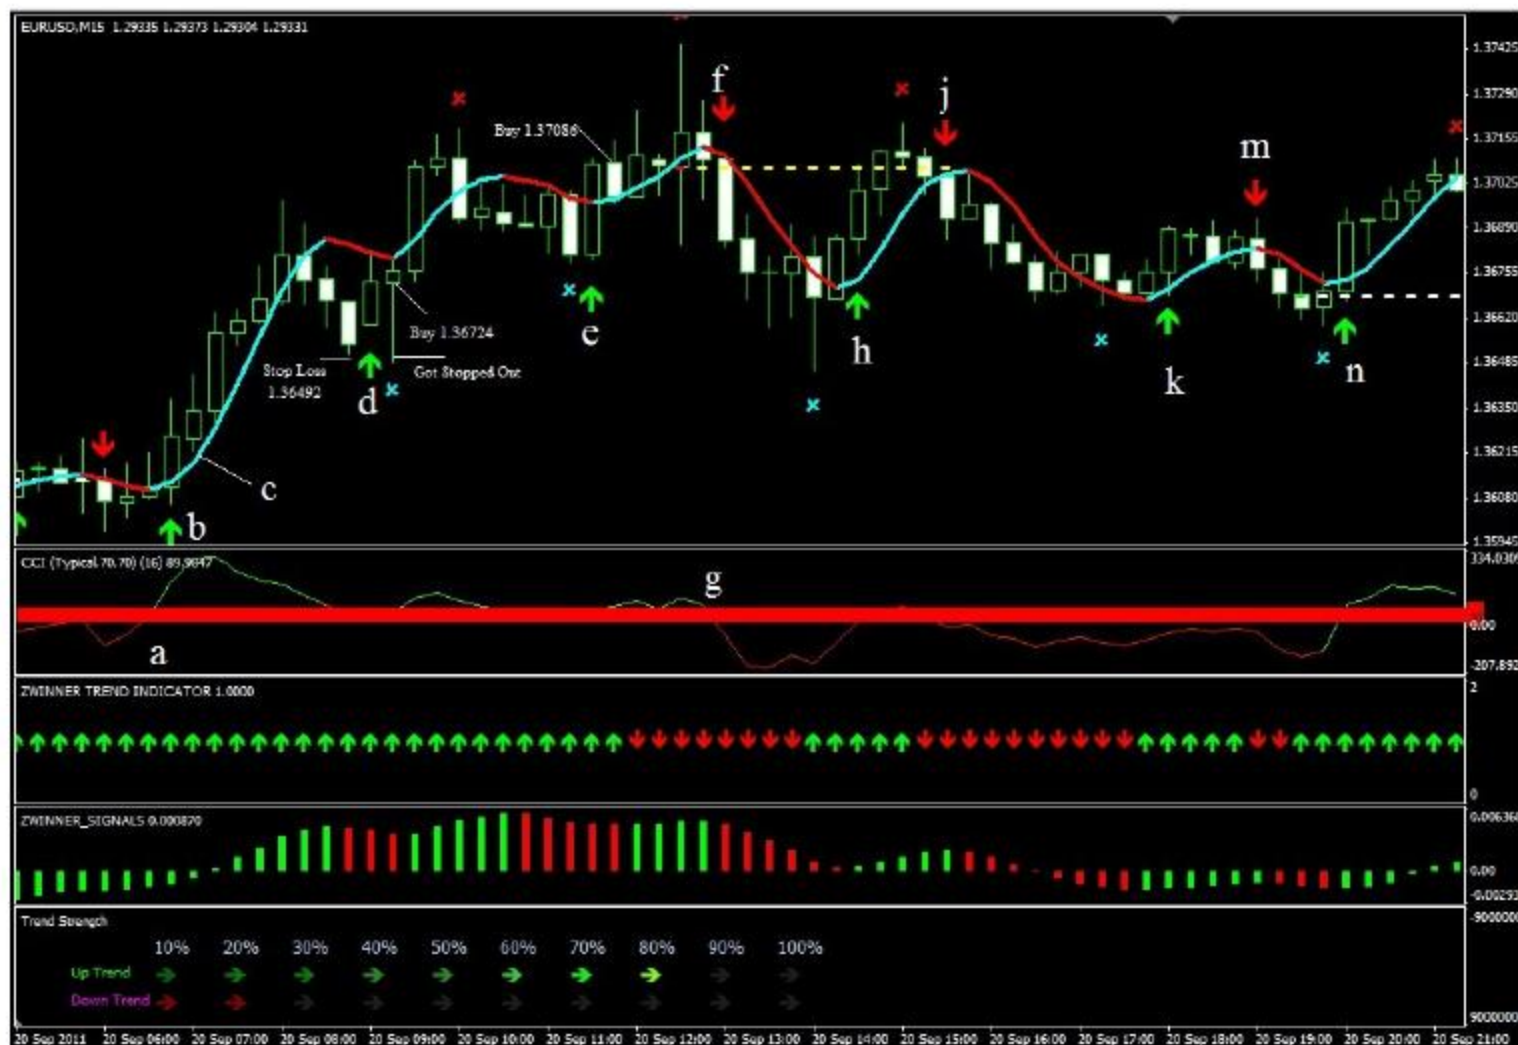

H) At 'h' we get a Buy Arrow, the ZColour Signal has changed colour to Aqua and the CCI also went above the 50 level so we Buy at the open of the next candle and make 10 pips.

J) At 'j' we get a Sell Arrow, the CCI is about to go below the 50 Level, the ZTrend Indicator is also in a Sell Mode, at the open of the next candle the ZColour Signal also changes colour to Red and we go short at the open of the new candle and quickly make 10 pips

K) At 'k' we get a Buy Arrow, the CCI is well below the Red Band. This is a Fake Signal so we stay aside.

M) At 'm' we get a Sell Arrow, the CCI is already below the Red Band so we go short at the open of the next candle and make 10 pips Profit.

N) at 'n' we get a Buy Arrow, the CCI is already above the Red band, the ZColour is also Aqua and we are getting Buy Signals from all quarters so we go Long and make another 10 pips Profit.

All together we got 8 Trades, profited in 7 of them and lost in one foolishly. In all we made a total Profit of 57 pips. Not bad for a days work.

Did you notice that we got the ZWINNER X Factors before every reversals. We did not use the X Factor trading the Ranging Market but you will find it very helpful in your Trading Arsenal.

So now you know how to trade the 1Hr and the 15 Min Charts and make money everyday.
