SCALPING

Trading The 1 Minute Charts

Scalping is most profitable when the Market is Volatile. All you need are the 3 Indicators. The ZWINNER HEART, the ZWINNER BRAINS and the Trend Strength Indicator. I am sure by now you know what I mean.

The ZWINER X Factor is the Heart of the ZWINNER 21 Scalping System and the ZWINNER Colour Signal is the Brains of the ZWINNER 21 Scalping System. You need only these two Indicators plus the Trend Strength Indicator. The other Indicator that is useful is the Support & Resistance Indicator, showing you where a reversal is expected. All other Indicators are Complimentary and its at your Discretion if you wish to add them to get more strength to your Scalping System. The Trend Strength Indicator shows the current Trend on each and every candle that opens. If the Strength is more than 70% then the Trend is still there but weak. The Strength over 80% is what we want. When we see the Strength diminishing, we have to be very careful, the markets may turn against us..

I love the ZWINNER 21 Scalping System because the X Factor creates

an X before a Reversal. As soon as I see the X, I get ready to exit my Trade. You will see the X going with the current candle as it progresses. You will also see the X jump from previous candle to the current candle as long as the trend continues in the same direction. It is therefore advisable to keep an eye on the ZWINNER Colour Change too and always exit at the open of the next candle if the X has not jumped on the new candles or when you see the next candle opened below the present candle and is heading down.

You will have to use your Discretion. After a little practice you will become an Expert trading the ZWINNER 21 Scalping System. Just keep your eyes on the Trend Strength Indicator and the ZColour Change.

This my favourite System and many times I have made over 100 pips profit. You may lose a few trades while you are new because the Volatile markets run very rapidly but don't worry once you get the practice, you will become highly Efficient Scalper.

Here is the EUR/USD 1 Minute Chart with entry and exit points

marked from 'a' to 'm'

Please note that in the chart below all the Xs are shown Static, in fact the Xs are not static in Real Life Trading. The Xs move with the candles. Once we are in a Trade and if an X has suddenly emerged then you need to monitor your trades carefully. As the candle increases in length so does the X advances ahead of the candle and when the new candle opens and if the trend continues ahead then the X will jump in front of the new candle and travel with it. We exit only when we see a new candle has opened and its going in the opposite direction and if we see a change in the Trend Strength and the ZColour change.

I will explain below assuming the Xs are static, so that you may understand the System:

- A) At 'a' we get a Sell Arrow and also the Zcolour Signal is Red so we go short at the open of the next candle at 1.29251
- B) At 'b' we get the X therefore we exit at the open of the next candle at 1.29222 and make a profit of 2.9 pips
- C) At 'c' we get a Buy Arrow and the ZColour Signal has also turned Aqua, so we go Long at the open of the next candle at 1.29254
- D) At 'd' we get a Red X so we exit at the open of the next candle at 1.29366 and make a profit of 11.2 pips

E-F) At 'e' we get a Rex X and at 'f' we get the Sell Arrow, the Zcolour Signal is also Red so we go Short at the open of the new candle at 1.29320

G) At 'g' we get the X so we exit at the open of the next candle at 1.29274 and make a profit of 4.6 pips

H) At 'h' we get a Buy Arrow, the ZColour Signal is also Aqua so we go Long at the open of the next candle at 1.29356

J) At 'j' we get the Red X so we exit at the open of the next candle at 1.29467 with a Profit of 11.1 pips.

K) At 'k' we get a Sell Arrow and the ZColour Signal is also Red so we go short at the open of the next candle at 1.29433

M) At 'm' we get the Blue X so we exit at the open of the next candle at 1.29316 making a Profit of 11.7 pips

Thus in 60 Minutes we had 5 Profitable Trades giving us 41.5 pips.

Nowhere we were in danger of getting stopped out. But this is Forex
you can say nothing with Guarantee, you can get stopped out any time.
