Ahsans Awesome Accelerator Method

Setup

- A 4 Hour Chart of desired currency pair.
- Exponential Moving Average with period 5.
- Simple Moving Average with period 10.
- MA Crossover Alert Indicator.
- Awesome Oscillator and Accelerator oscillator.
- Support and resistance indicator or Fractals.
- MTF stochastics with settings 10,3,3 with daily Timeframe i.e. 1440.
- Vegas1hr with risk model 4.
- MACD crossover indicator with 8,17,9 settings.
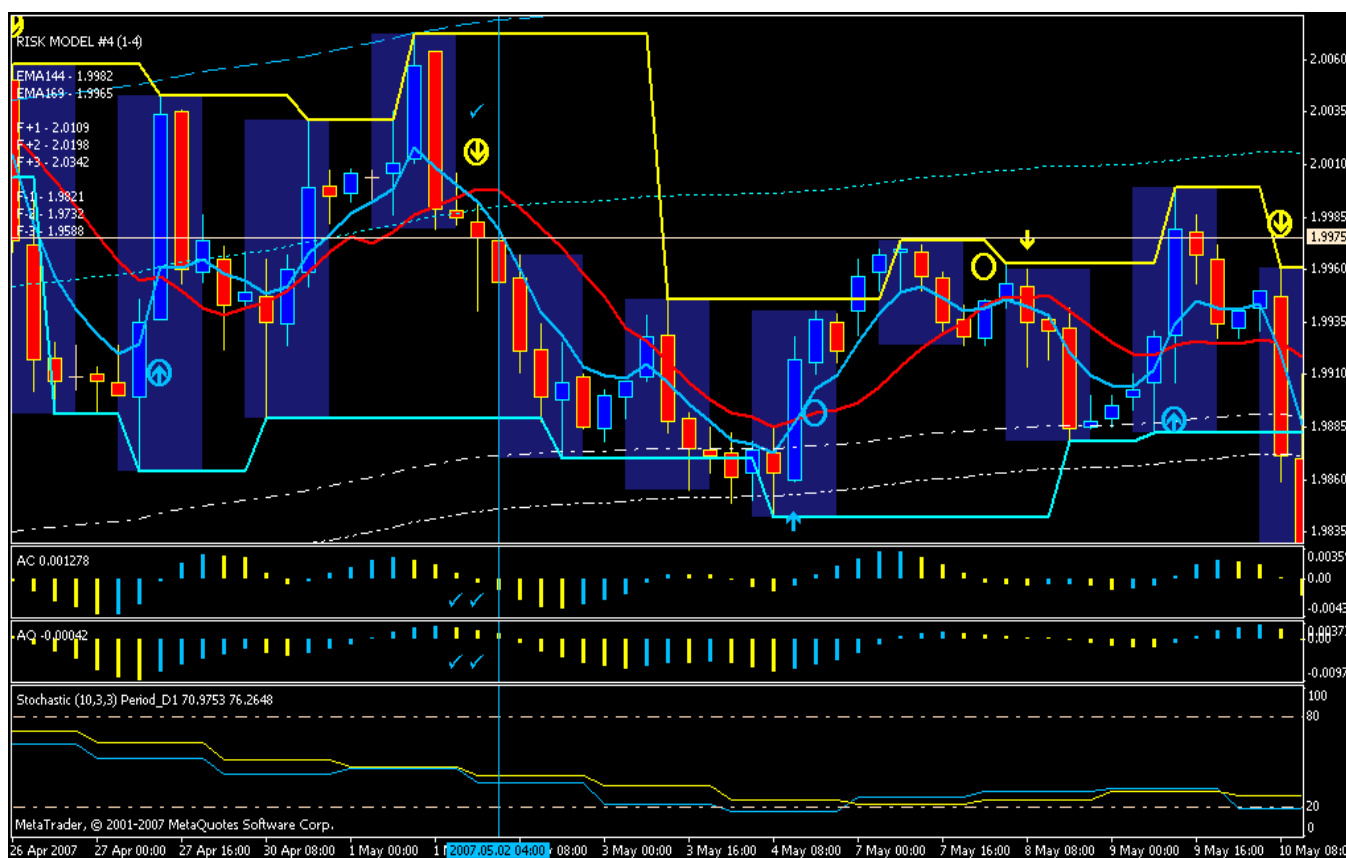

Your Chart will look like this:-

Entry Rules:-

There are mainly two types of signals.

1. Main Signals (I call them Pehla Signals).
2. And re-entry Signals. These are also of two types namely Dosra and Tesra Signals.(These have better Win% than main signals but are less in number)

Pehla Signal:-

Buy at the opening of a candle when 5ema crosses above 10sma and both the oscillators (AO & AC) are showing 2 consecutive blue bars. Inverse the scenarios incase of a short or sell entry.These signals are most frequent and easy to identify and trade.
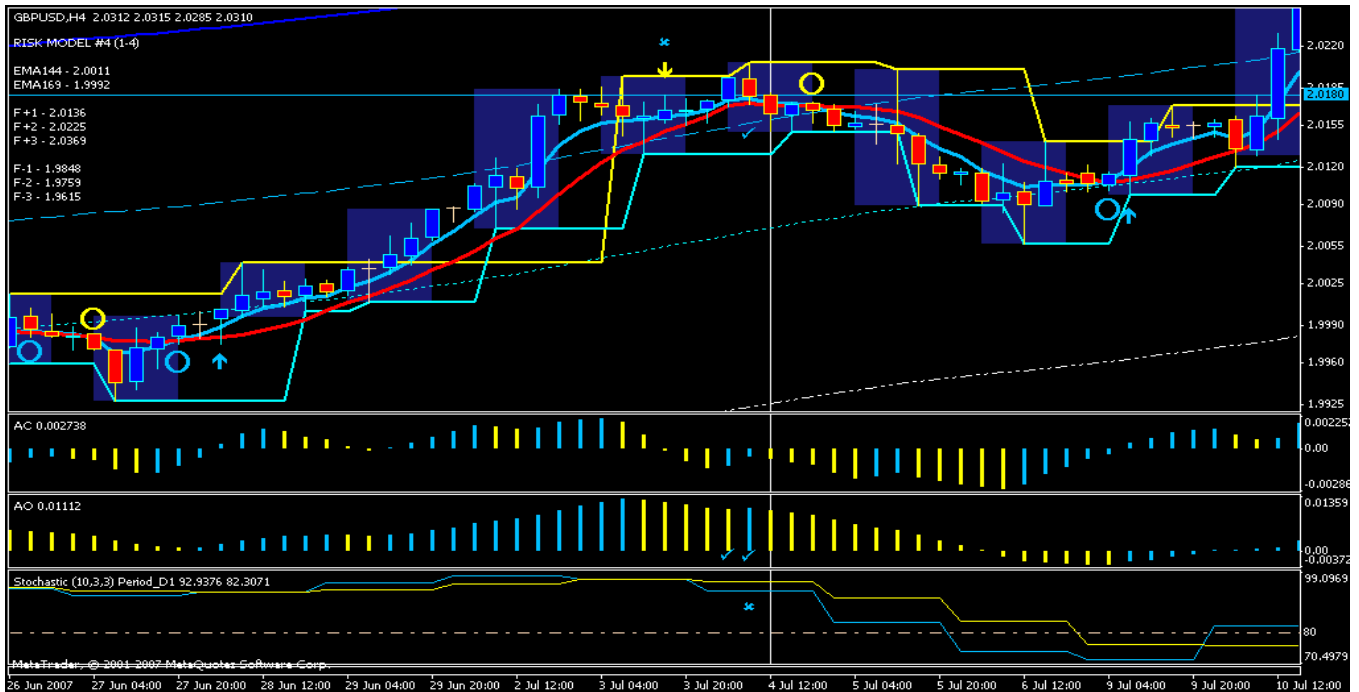

1. In this example There were two consecutive yellow bars on both oscillators EMA crossed SMA, MACD and stochs are in favor (These are extra confirmations) so we enter short.

Dosra Signal:-

If the color of the oscillator bars changes to inverse the Pehla Signal without a moving average crossover and then again change in favor of Pehla signal we re-enter.These signals are less in no but have greater win%.

1. Both the Oscillators changed to yellow while MA's didn't crossed so when oscillators changed back colors to blue a re-entry should have been taken. MACD Crossover happened few bars back while Stochs had also reversed so overall this was a risky trade.
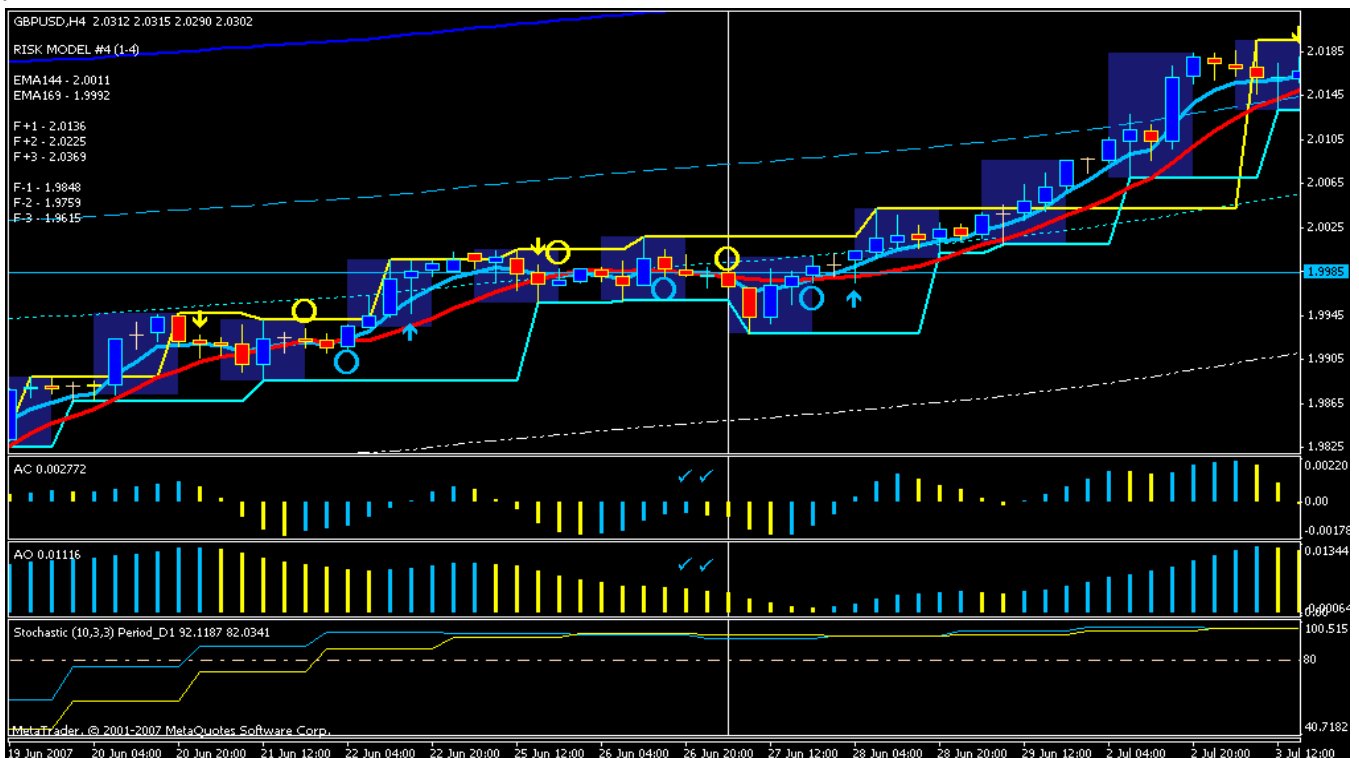

Tesra Signal:-

If only one of the oscillator bar changes color inverse of Pehla Signal and then again change in favor of Pehla signal we re-enter.

These signals are least in no and have the greatest win%.

Examples:

1. AC changed its color to blue while AO remained the same so when AC again changed its color to yellow we take another short at 1.9985.

Money Management

I use different money management rules for different pairs. I divide my position size in five parts.

You can get an idea about money management rules I used by following table:

Pair	SL	Moving SL	TP 1	TP 2 (40%)	TP 3	TP 4
GBP/USD	70 to 80	Tighten your SL after +40 to nearest reasonable S or R After reaching +65 to +85 move SL to +5. After BE (+5) start trailing SL by 70 pips till +80 pips are locked. After this move SL according to S&R levels.	100 Or Nearest Vegas line if more than +50	Candle close after touching Nearest Vegas line if more than +50 or after +100.	Candle close after reaching next Vegas line if not more than +150 pips or MACD crossover or around TP 2. Always make sure TP3 is more than TP2 even if its mere 5 pips	Candle close after +300 ,MACD Crossover or S & R levels depending on move
