# Why the SYNERGY Method?

Mark Douglas, author of Trading in the Zone, states:

*“The best traders have developed an edge  
and more importantly, they trust their edge.”*

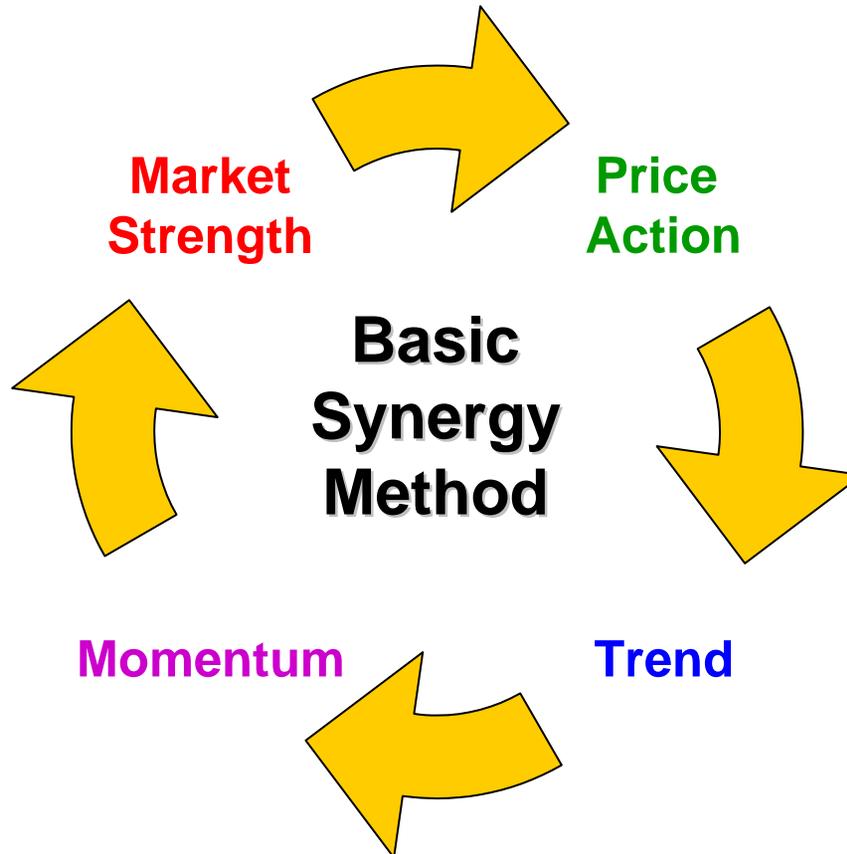

# Why the SYNERGY Method?

The “*trading edge*” of Synergy:

1. A high degree of probability.
2. Enter and exit trades with less emotions.
3. Trade decisions dictated by price action, not by preconceived beliefs and opinions.

# What is SYNERGY?

“Mutually advantageous collaboration of forces to create an enhanced combined result.”

# **SYNERGY Method**

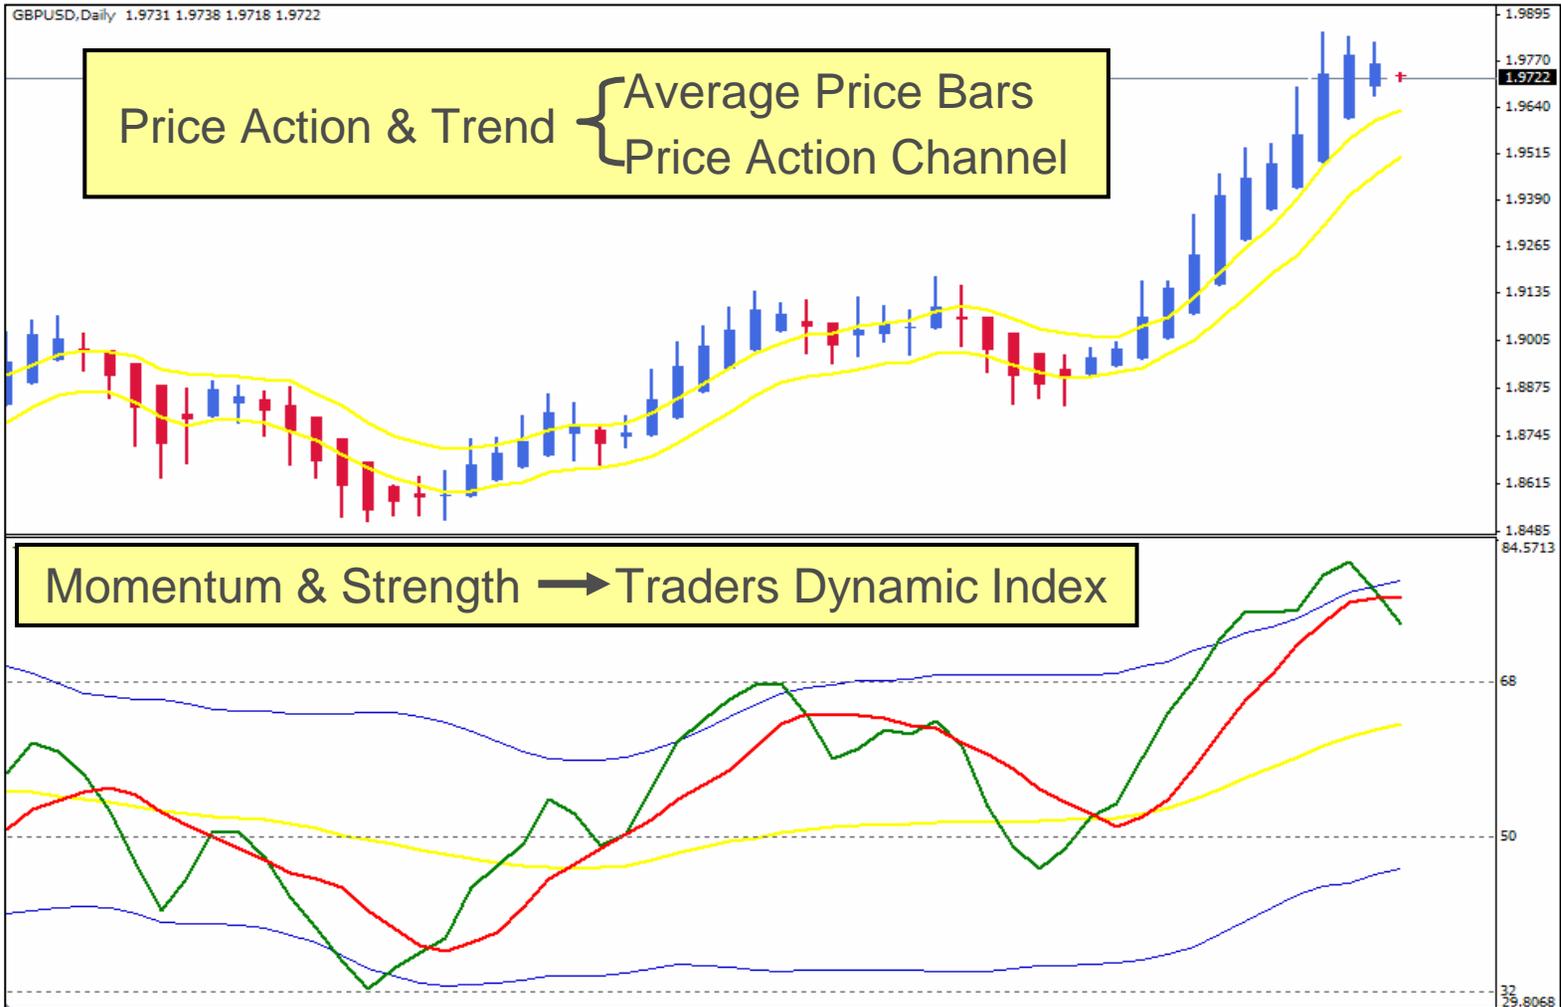

There are 4 primary market conditions  
in a potential trade:

1. Price action
2. Trend
3. Momentum
4. Strength

# **SYNERGY Chart Setup**

- Average Price Bars
- Price Action Channel
- Traders Dynamic Index

# SYNERGY Method

# **Average Price Bars**

# Average Price Bars

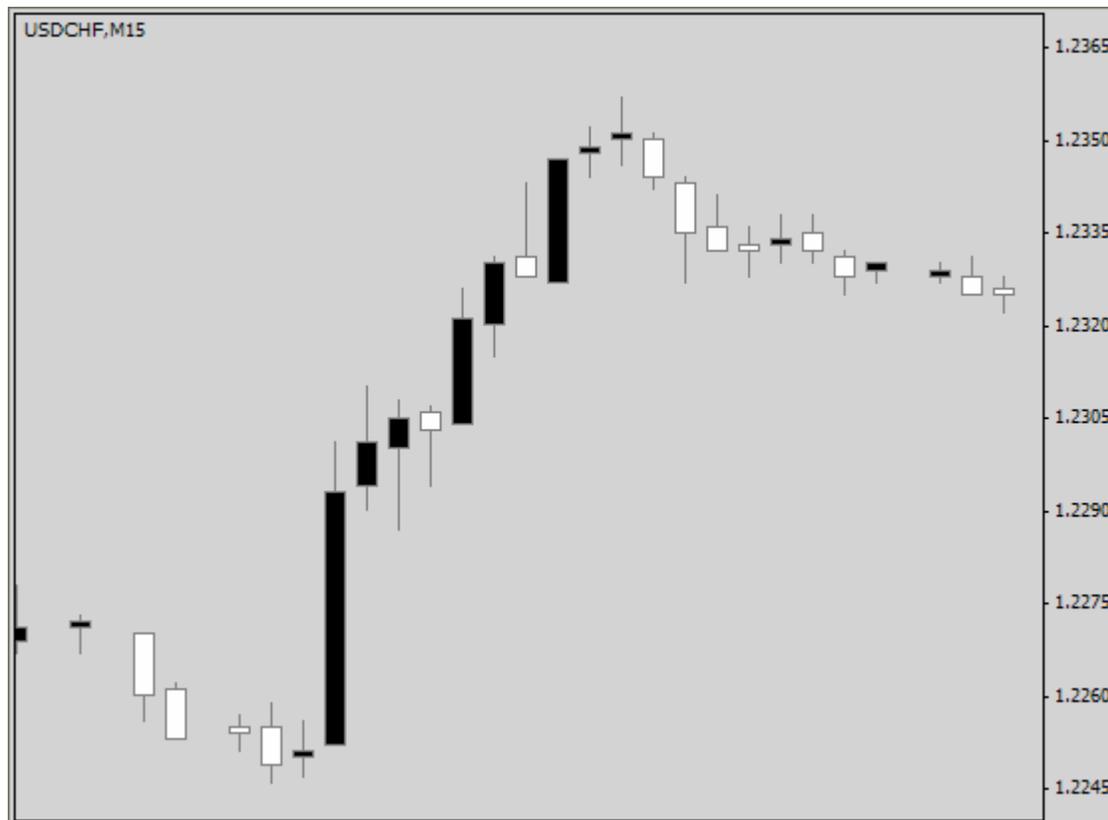

- Provide a better depiction of current market.
- Reveal market strength & consolidation.
- Eliminate fluctuations of nominal price action.
- Remove the noise of price distortion of the underlying trend.

# Average Price Bars

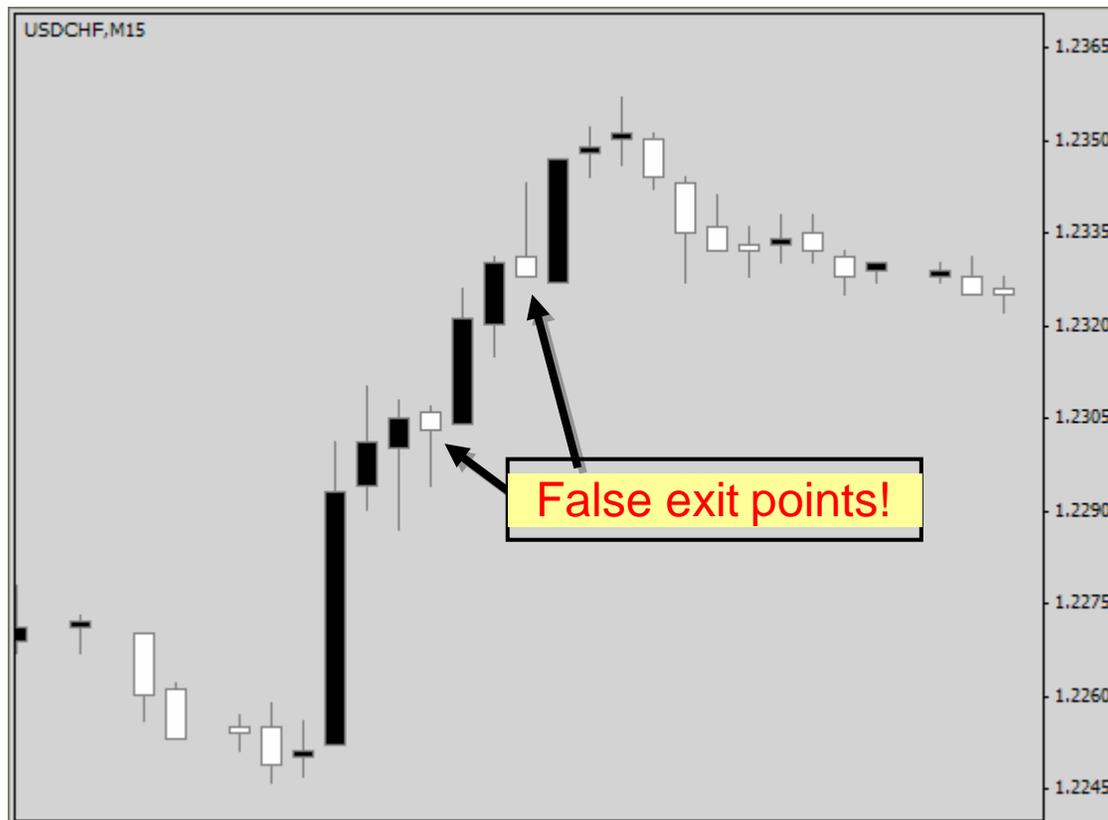

- Use the Heiken Ashi method.
- Heiken = “Average”
- Ashi = “Bar”
- Heiken Ashi averaging technique:
  - ➔  $HA\_Close = (Open + High + Low + Close) / 4$
  - $haOpen = (haOpen(previous\ bar) + haClose(previous\ bar)) / 2$
  - $haHigh = Maximum(High, haOpen)$
  - $haLow = Minimum(Low, haOpen)$

*The HA\_Close is most important for the SYNERGY Method.*

# Average Price Bars

# Average Price Bars

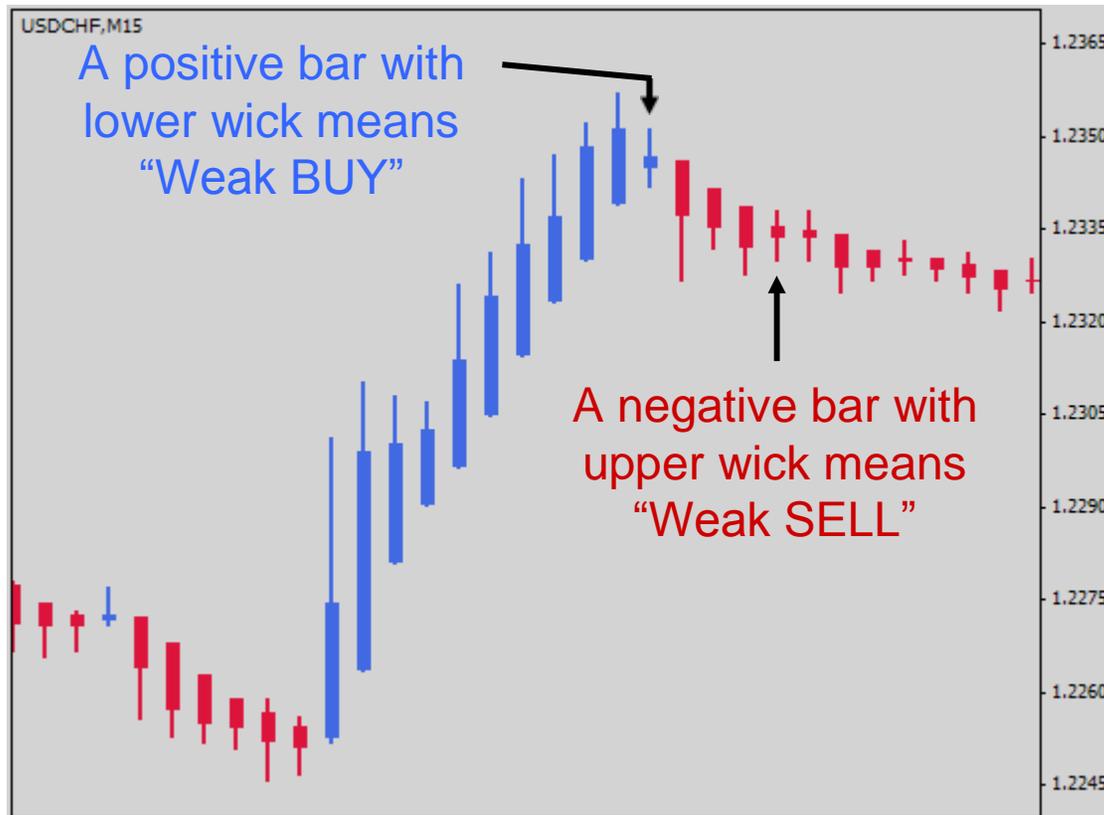

# Average Price Bars

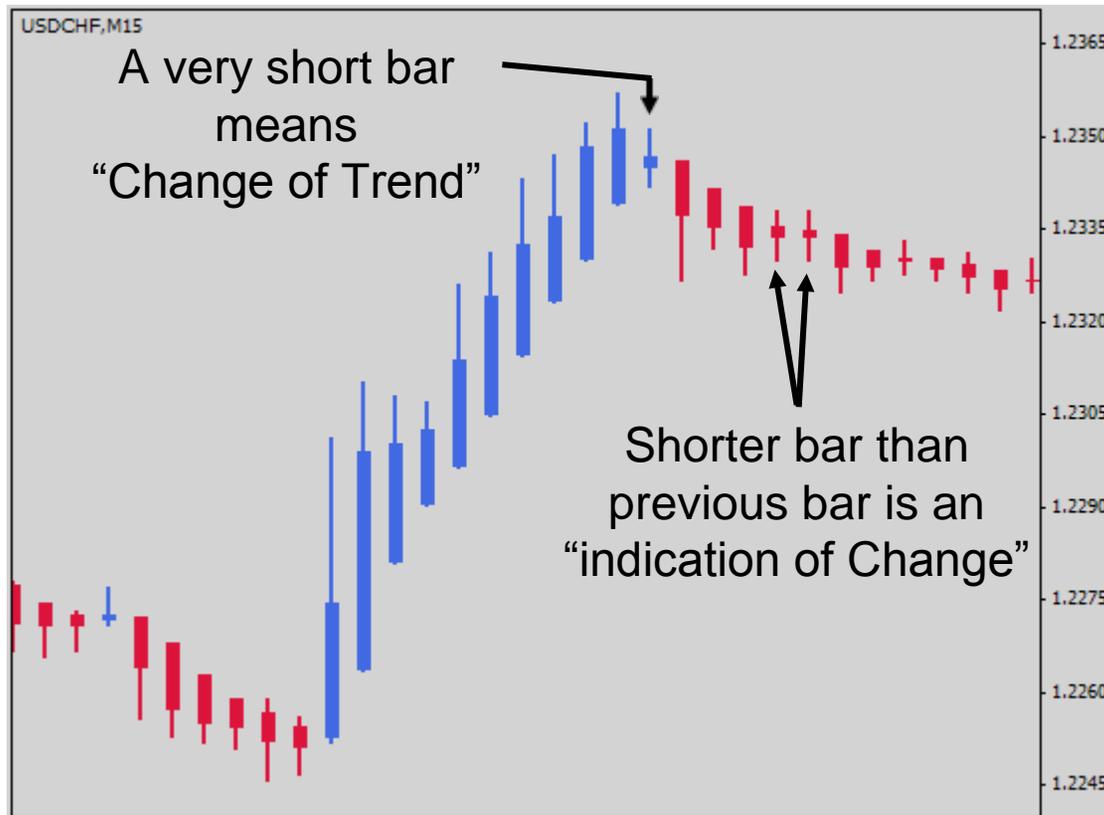

# Average Price Bars

# **Price Action Channel**

# Traditional Price Channel

Traditional Price Channel has two formats:

1. A pair of trend lines above and below price like the Linear Regression Channel.
2. An envelope of bands around price with set deviation limits such as Keltner Channel.

# Traditional Price Channel

Used to determine upper and lower boundaries and signal potential reversals or breakouts.

Traditional price channels can cause “reactive” trading!

# Price Action Channel

Sets inside of price movement...instead of outside of price waiting for the market.

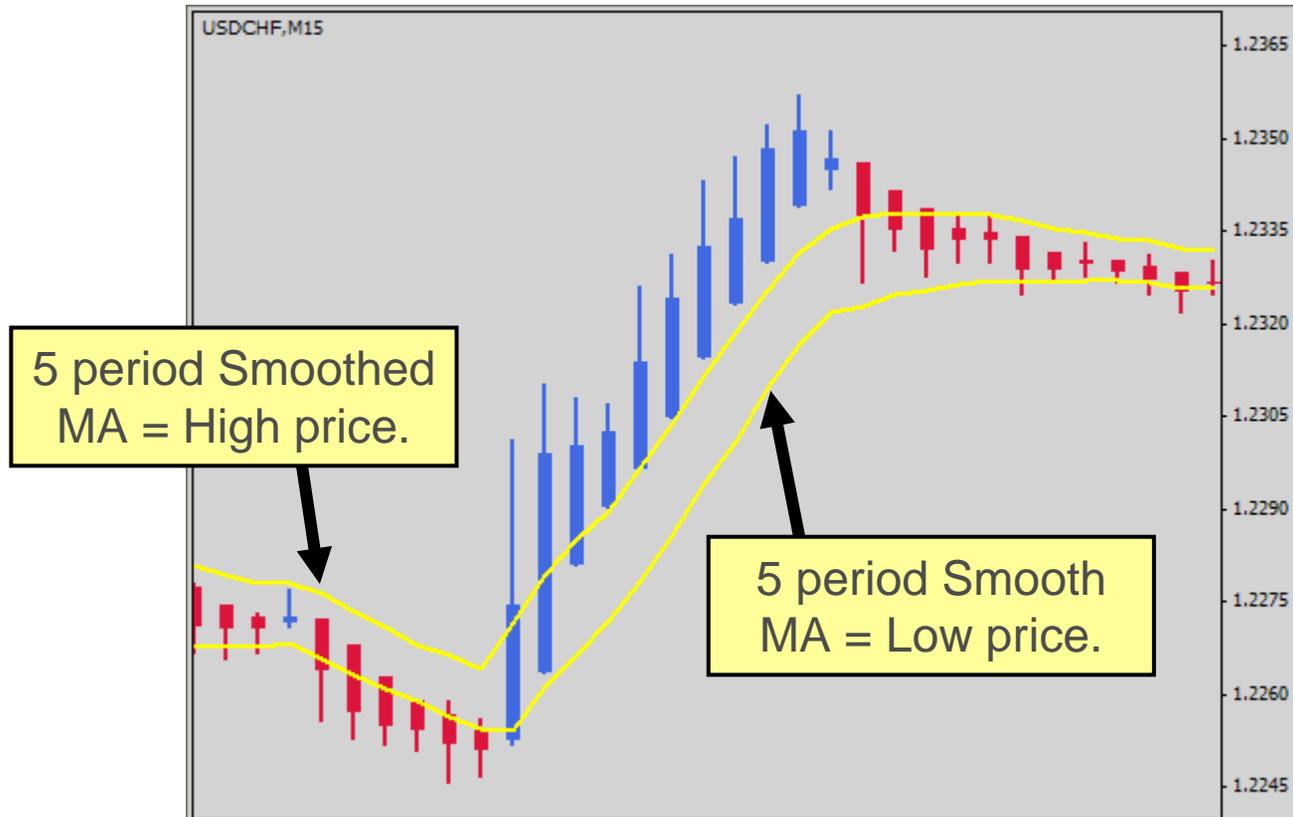

Used by institutional traders and sophisticated trading programs.

Promotes “responsive” trading!

# Price Action Channel

- Use Smoothed Moving Average
- Top of Channel = 5 period, High
- Bottom of Channel = 5 period, Low

# Price Action Channel

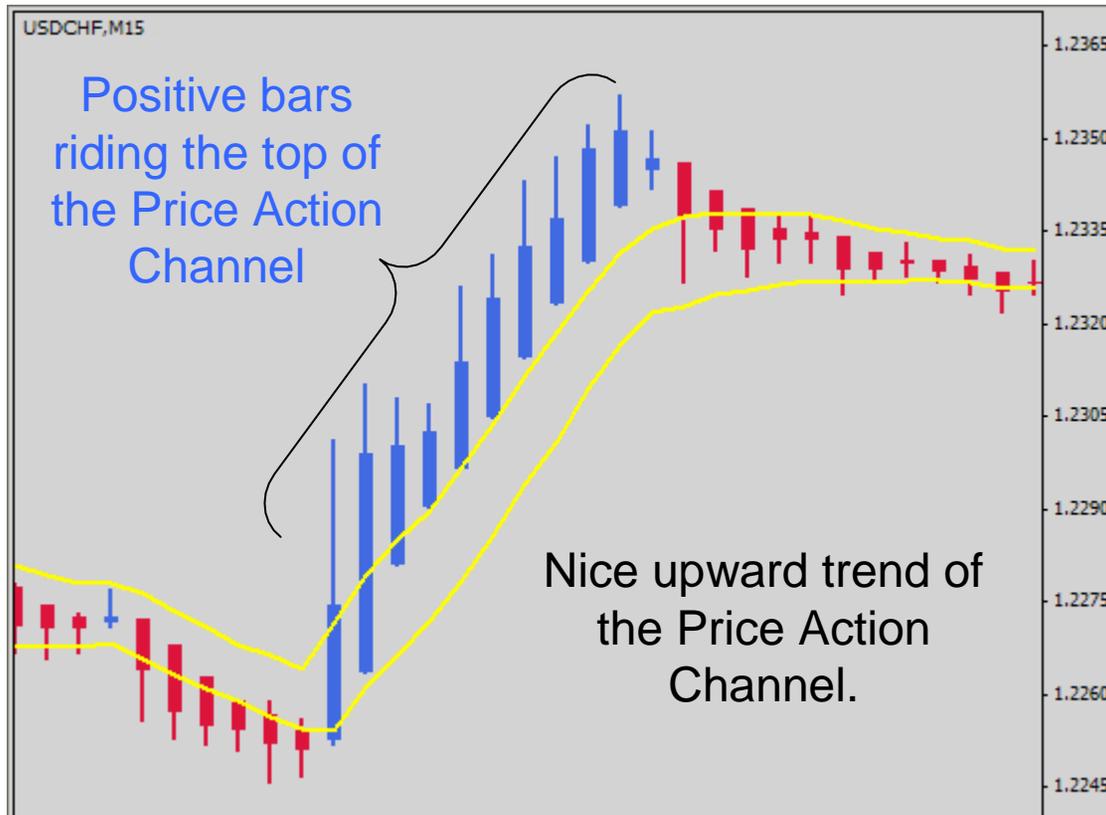

# Price Action Channel

- Provides overall trend direction.
- Reveals periods of consolidation.
- Used primarily as an Entry target.
- **BUY Trend** – Average Price Bars tend to run on top of channel.
- **SELL Trend** – Average Price Bars tend to run on bottom of channel.

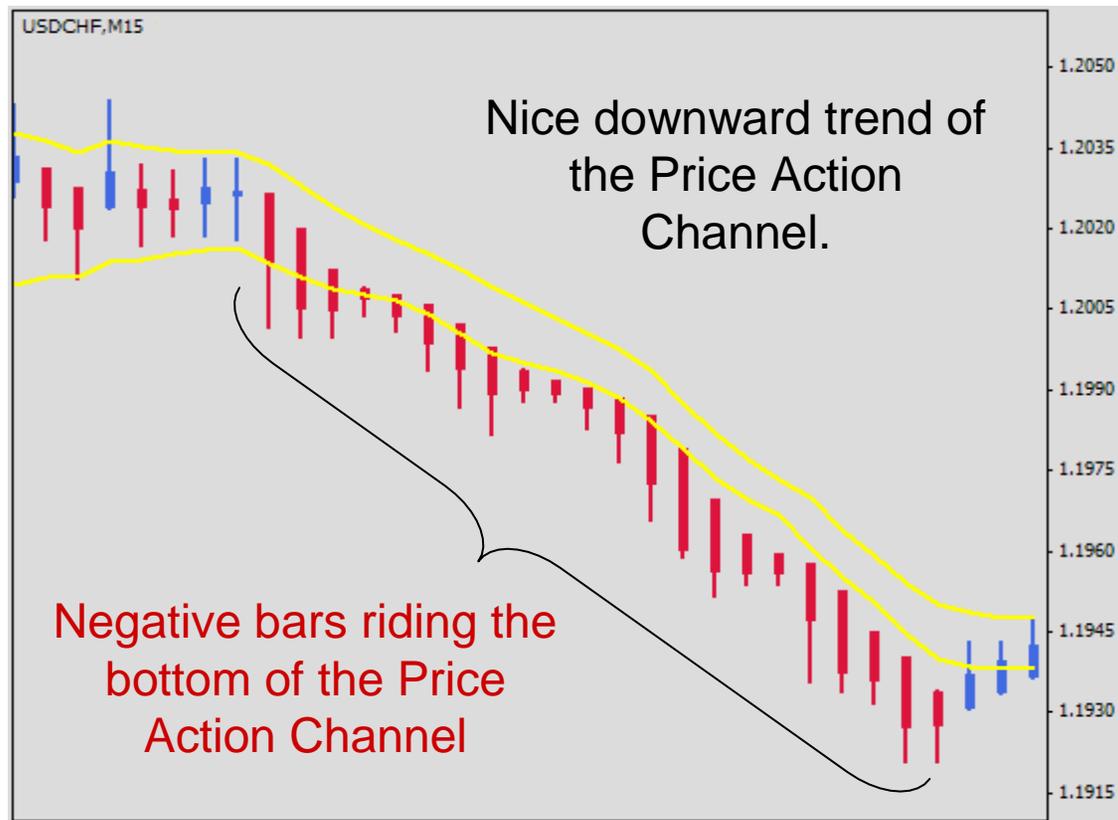

# Price Action Channel

*“Good BUY (Long) Trend”*

# Price Action Channel

*“Good SELL (Short) Trend”*

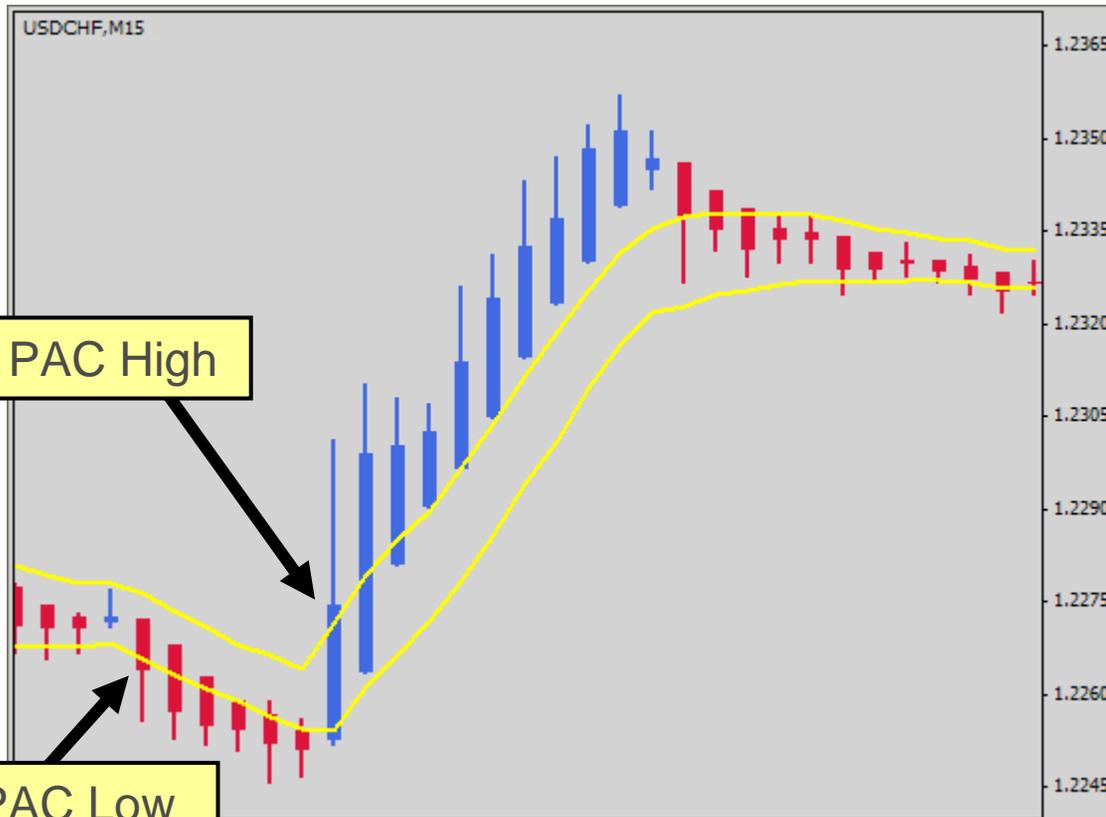

# Price Action Channel

*“Range-Bound, No Trend”*

# Price Action Channel

*“Entry Condition using PAC”*

HA\_Close > PAC High

HA\_Close < PAC Low

# Price Action Channel

*“Entry Condition: HA\_Close & PAC”*

Use the Data Window to compare the value of the HA\_Close to the PAC.

To open the Data Window:  
At the top menu bar, click View  Data Window.

The 1<sup>st</sup> MA(5) is PAC High.

The 2<sup>nd</sup> MA(5) is PAC Low.

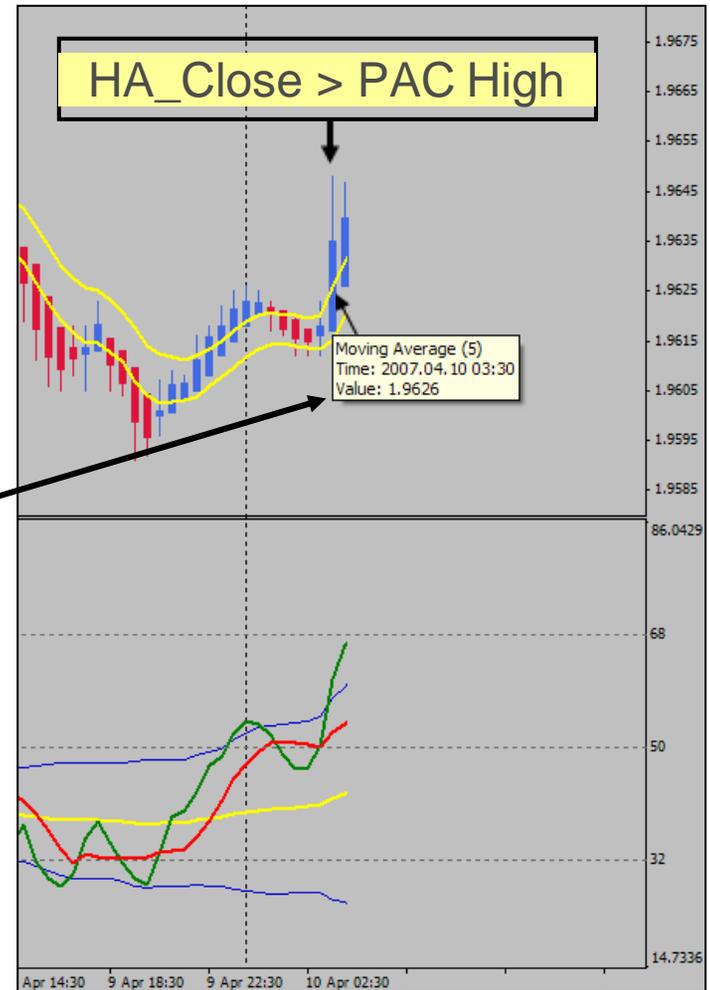

**Long entry condition:**  
 $HA\_Close > 1^{st} MA(5)$

**Short entry condition:**  
 $HA\_Close < 2^{nd} MA(5)$

# **Traders Dynamic Index**

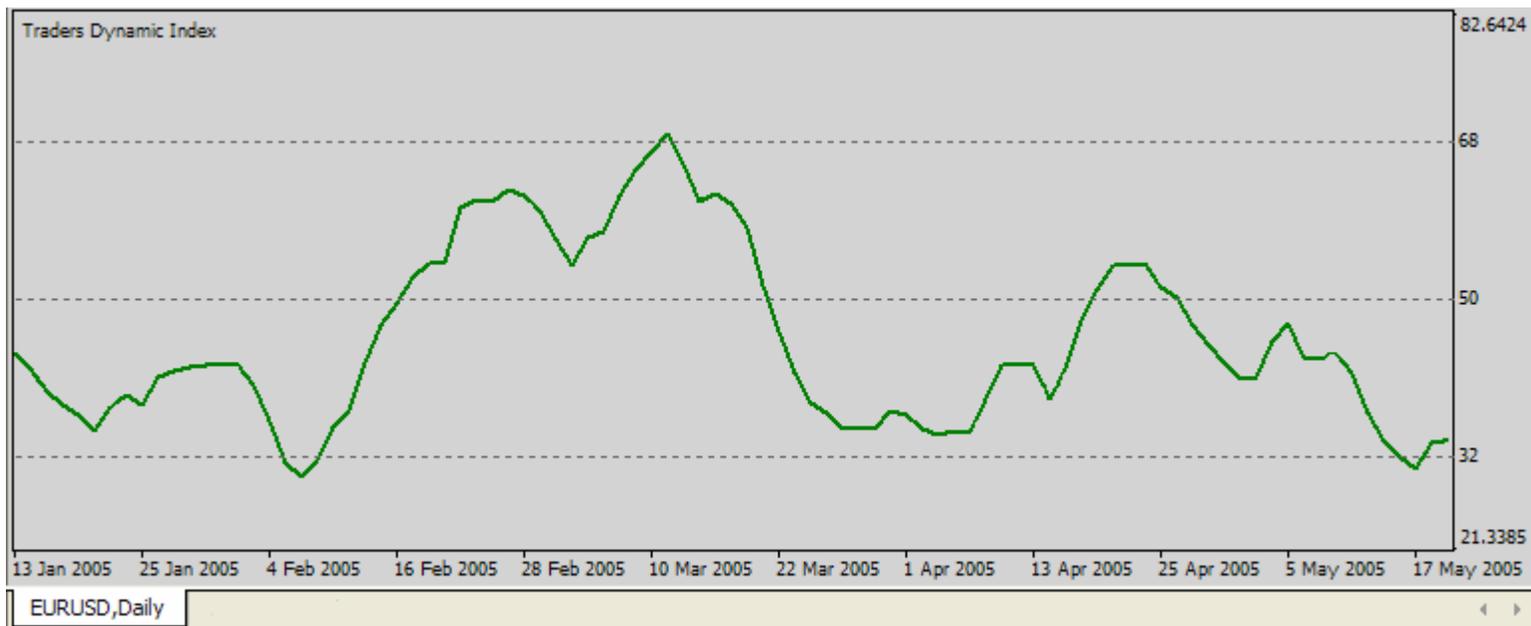

# Traders Dynamic Index

A hybrid indicator developed to indicate market conditions related to *trend direction*, *momentum*, and *market volatility*.

*An “all-in-one” indicator!*

# Traders Dynamic Index

## Step 1: RSI Price (Green) Line

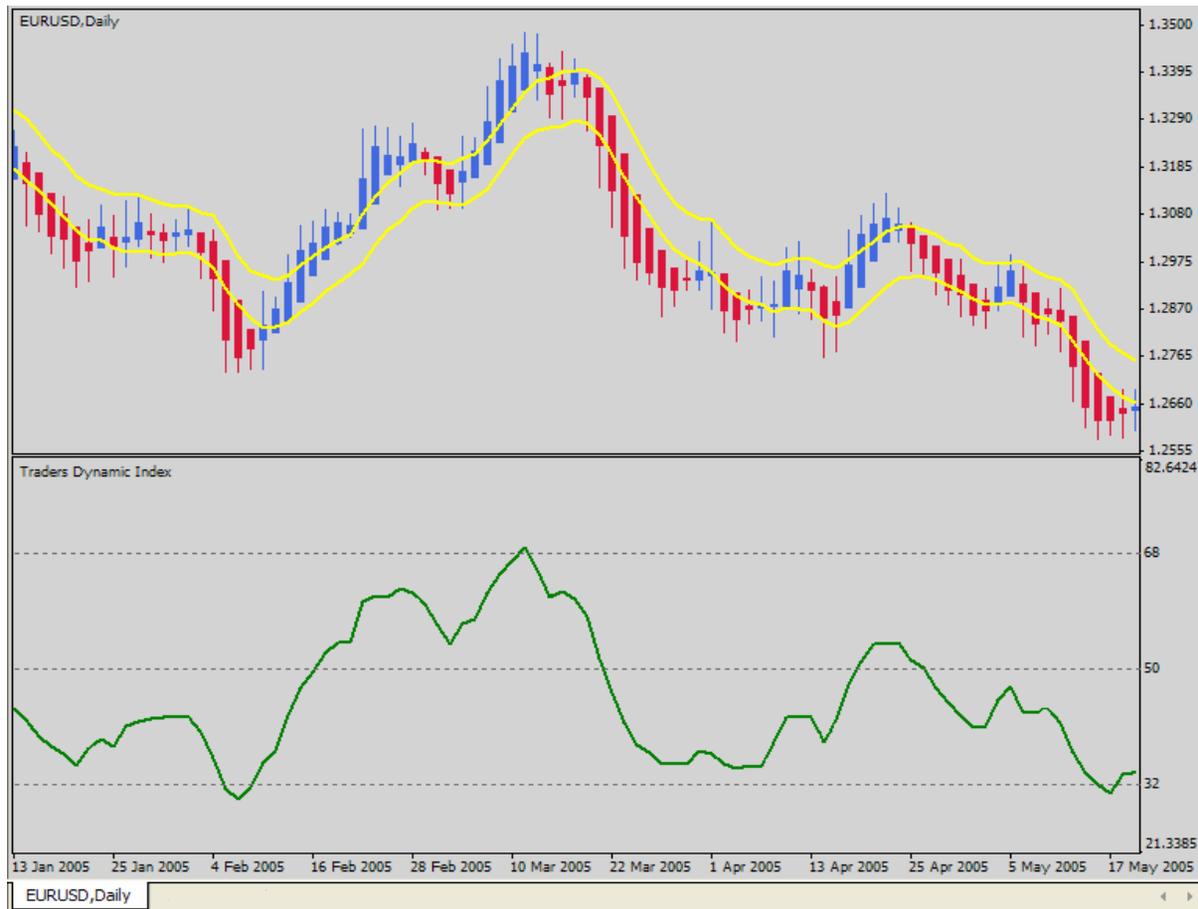

Rules: Trade **Long** when **Green** line  $> 50$ .

Trade **Short** when **Green** line  $< 50$ .

Consider exit when **Green** line is  $> 68$  or  $< 32$ .

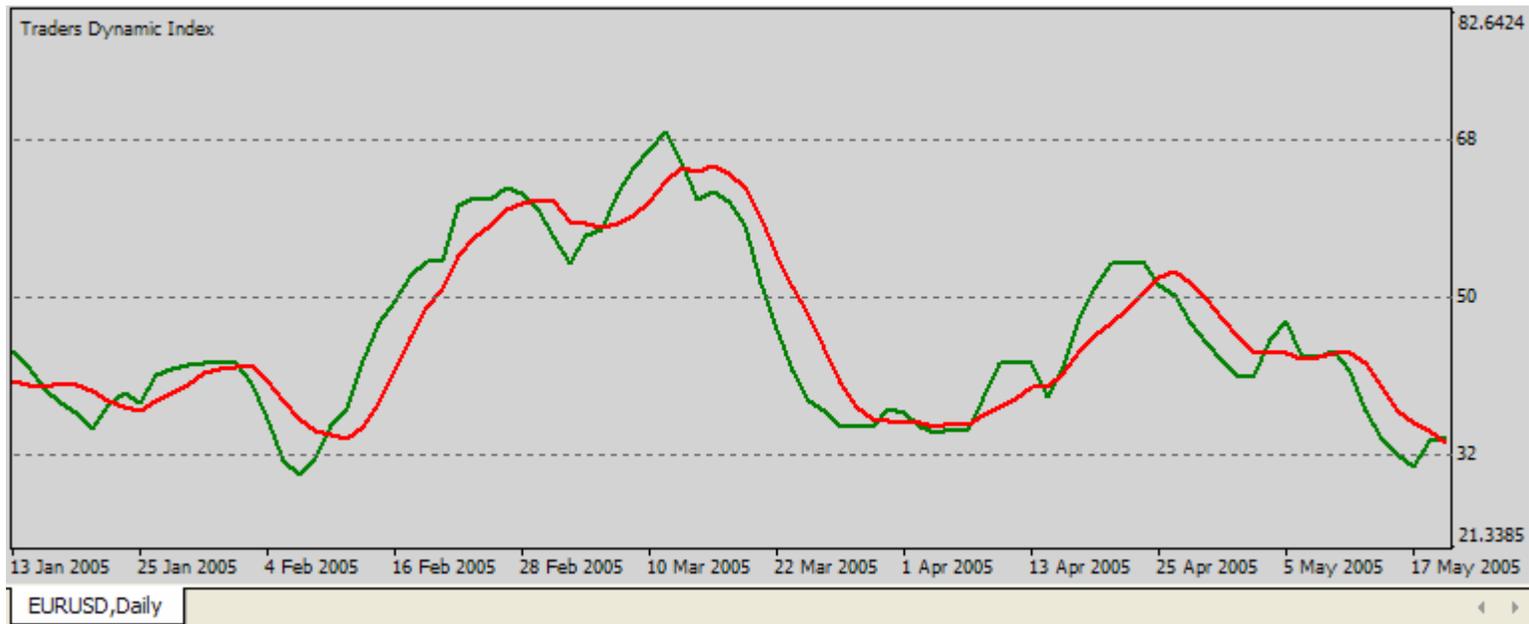

# Traders Dynamic Index

*RSI Price Line compared to Price Action*

# Traders Dynamic Index

## Step 2: Trade Signal (Red) Line

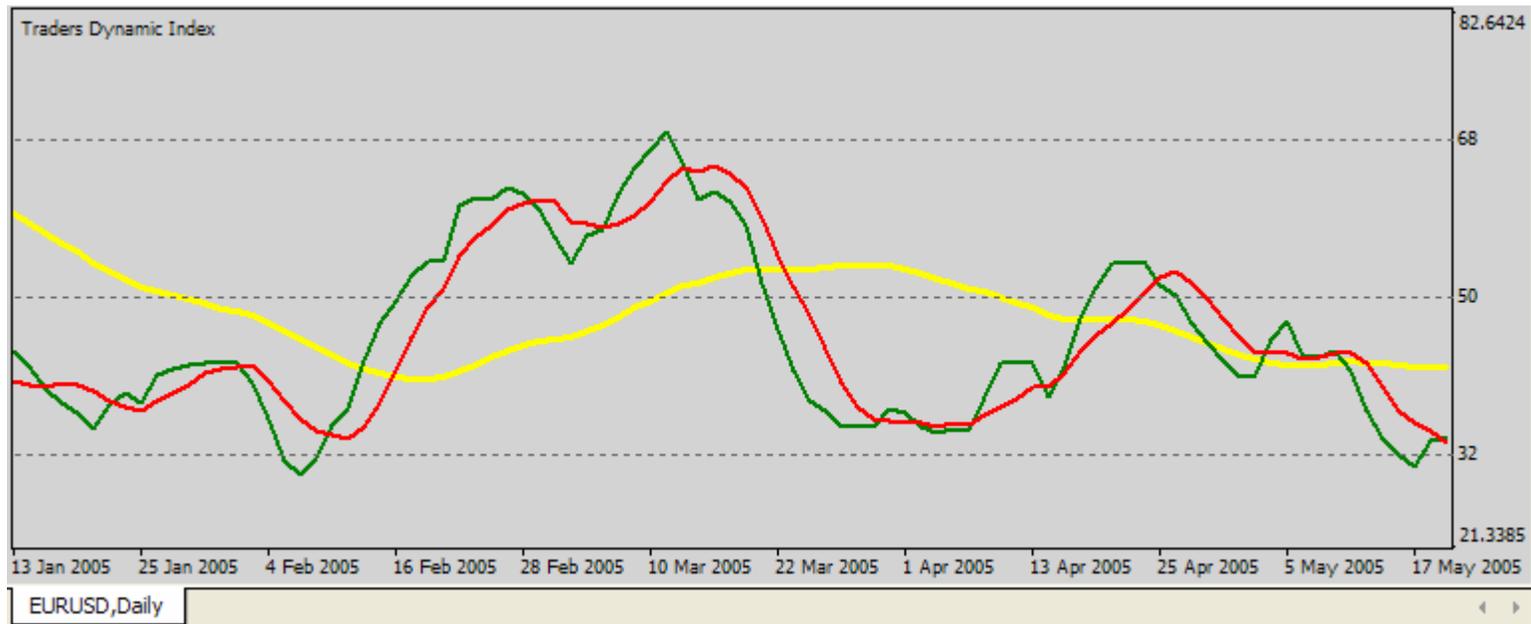

Rules: Trade **Long** when **Green** > **Red**.

Trade **Short** when **Green** < **Red**.

Exit trade when **Green** & **Red** crossover.

# Traders Dynamic Index

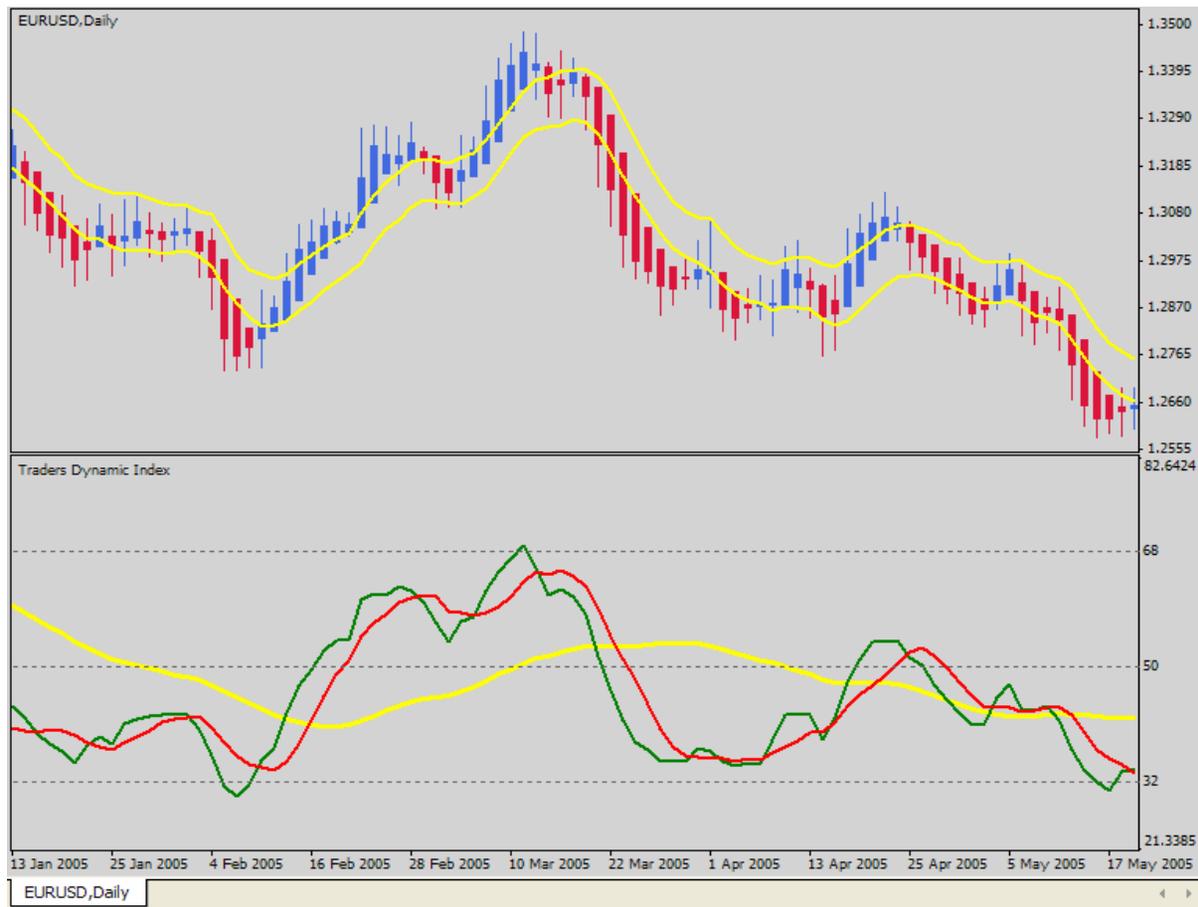

## Step 3: Market Base (Yellow) Line

**Rules:** *Market Base Line (MBL) is the Overall Trend.*  
Trade **Long** when **Green** is  $>$  **Yellow** line.  
Trade **Short** when **Green** is  $<$  **Yellow** line.

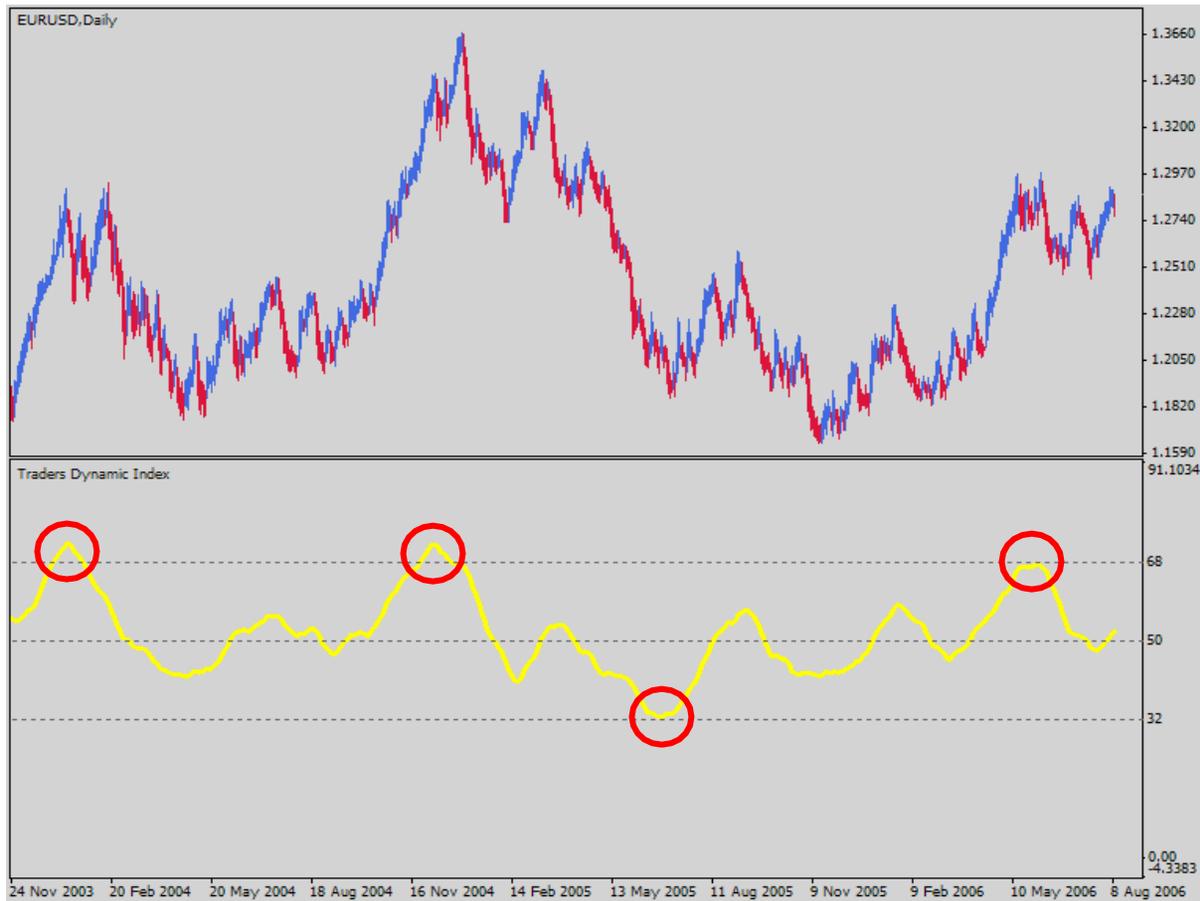

# Traders Dynamic Index

*Market Base Line compared to Price Action*

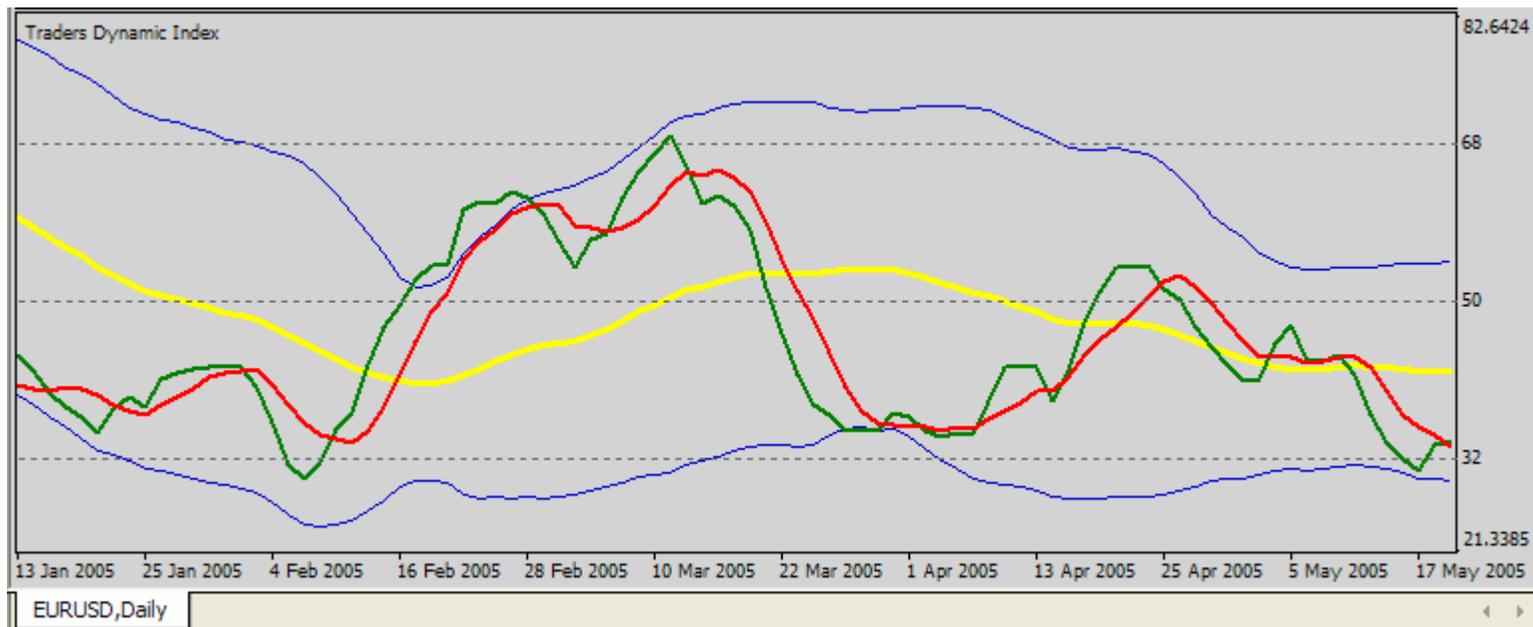

# Traders Dynamic Index

*Market Base Line forecasts Market Reversals*

# Traders Dynamic Index

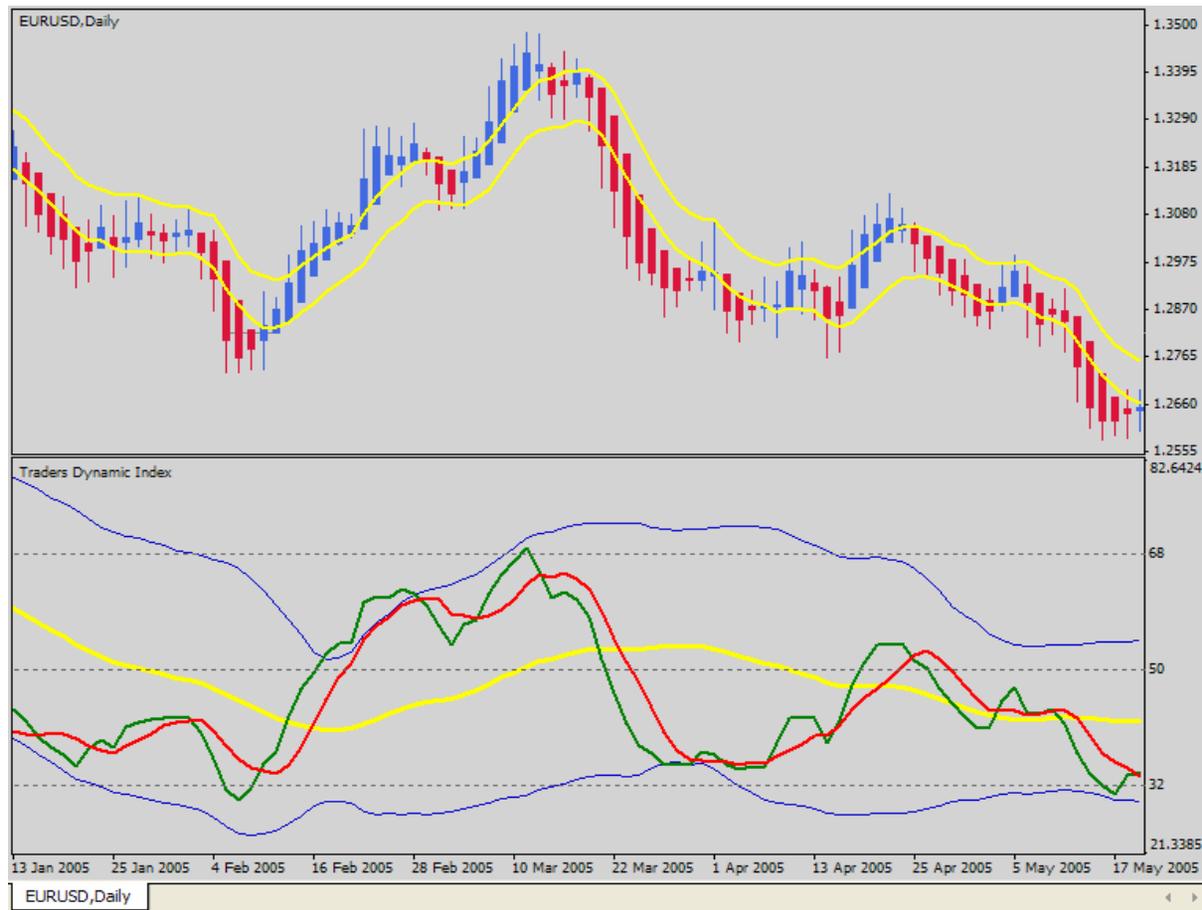

## Step 4: Volatility Band (Blue) Lines

*Rules: Possible to add to a **Long** when **Green** is  $>$  **VB**.  
Possible to add to a **Short** when **Green** is  $<$  **VB**.  
Consider exit when **Green** crosses back over **VB**.*

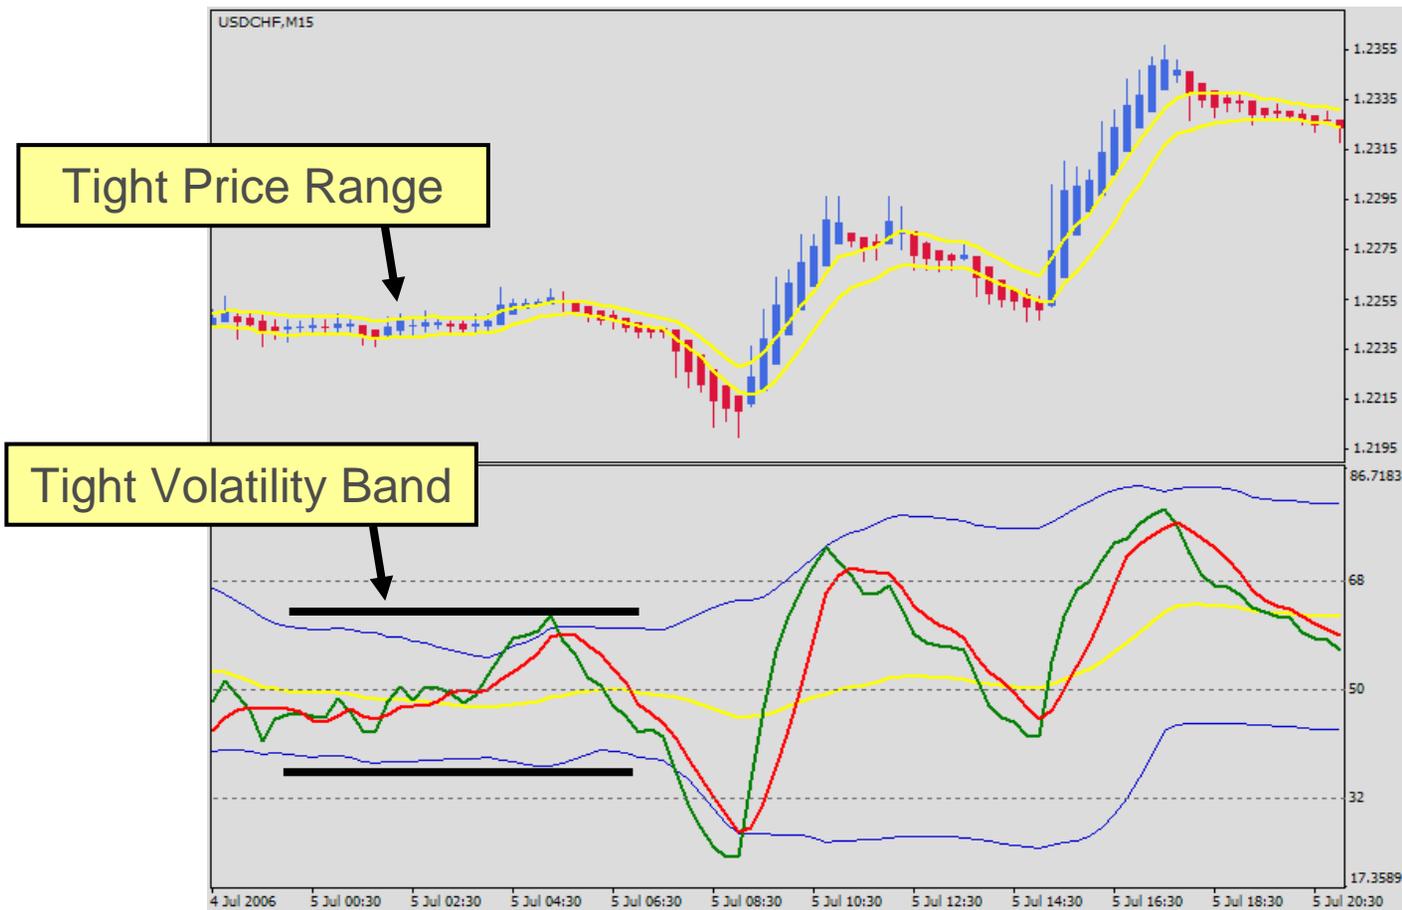

# Traders Dynamic Index

*Volatility Bands compared to Daily Price Action*

# Traders Dynamic Index

*Volatility Bands compared to Intraday Price Action*

# **SYNERGY Method**

## **Entry Rules**

# SYNERGY Method

*All systems GO!*

## Average Price Bars (APB)

- Look for **Positive** or **Negative** bars trending.
- Monitor the current **haClose**.
- **Long** entry =  $\text{haClose} > \text{PAC High Moving Average}$
- **Short** entry =  $\text{haClose} < \text{PAC Low Moving Average}$

# SYNERGY Method

*All systems GO!*

## Price Action Channel (PAC)

- Monitor the direction of the Channel.
- Monitor the High & Low Channel values in relation to the current haClose.
- **Long** entry = haClose > PAC High & PAC uptrend
- **Short** entry = haClose < PAC Low & PAC downtrend

# SYNERGY Method

*All systems GO!*

## Traders Dynamic Index (TDI)

- Long entry = RSI PL > 50, TSL, and MBL.  
(**Long** entry = **Green** line > 50, **Red** line, & **Yellow** line)
- Consider adding to Long if RSI PL > the upper Volatility Band and > 50, but < 68.
- Avoid entering a Long when RSI PL > the upper Volatility Band, > 50, and > 68.

# SYNERGY Method

*All systems GO!*

## Traders Dynamic Index (TDI)

- Short entry = RSI PL < 50, TSL, and MBL.  
(**Short** entry = **Green** line < 50, **Red** line, & **Yellow** line)
- Consider adding to Short if RSI PL < the lower Volatility Band and < 50, but > 32.
- Avoid entering a Short when RSI PL < the lower Volatility Band, < 50, and < 32.

# SYNERGY Method Entry Setups

**Long Entry:** (*All conditions are satisfied.*)

1. APB haClose > PAC High Moving Average.
2. PAC trending up.
3. TDI = RSI PL > 50, TSL, and MBL.

**Short Entry:** (*All conditions are satisfied.*)

1. APB haClose < PAC Low Moving Average.
2. PAC trending down.
3. TDI = RSI PL < 50, TSL, and MBL.

# **SYNERGY Method**

## **Exit Rules**

# SYNERGY Method

## *Exit Rules*

- APB Long exit  
Positive bar is much shorter than the previous bar or changes to a negative bar at close.
  
- PAC Long exit  
APB closes inside the channel.
  
- TDI Long exit =
  1. Green crosses back below Red to the downside.
  2. Green > 68
  3. Green crosses back below the upper Volatility Band to the upside.

# SYNERGY Method

## *Exit Rules*

➤ APB **Short** exit

Negative bar is much shorter than the previous bar or changes to a positive bar at close.

➤ PAC **Short** exit

APB closes inside the channel.

➤ TDI **Short** exit

1. **Green** crosses back over the **Red** to the upside.
2. **Green** < 32.
3. **Green** crosses back up over the lower Volatility Band.
