VENUS POWER USERS

This section is for traders that have experience with Meta Trader Platform and expert advisors and want to customize Venus Forex Robot themselves.

Venus works best in back tests and with EURUSD pair. The timeframe is irrelevant because Venus gets the values of the indicators from the frame it wants.

Read it even if you do not have experience with EAs. It will help you understand the inner workings of Venus.

In order to customize Venus you need to change the inputs of it accordingly.

Let's take all the inputs for Venus 1 by 1:

ExpertName: This is the name of our Forex Robot. This will be appearing in the trade comments.

MagicNumber: This is the magic number option that allows you to use Venus with other expert advisors simultaneously.

TalkOnOpen & TalkOnClose: This will allow the audification process we have embedded in Venus, that is to talk to you when new orders are opened or closed.

CloseOnOpposite: This is a security feature of Venus that will close current trading position when opposite direction signal appears.

UseCloseSignal: Security feature of Venus trading. Trade will close when the close signal appears.

UseRiskManagement: This is a risk feature on the lots of Venus. The risk is calculated in percentage and it is the risk of total equity per trade. See also: **Risk1 & Risk2**

UseVariableRisk: This works only when RiskManagement bool is on true and will add to total lots in consecutive winning trades and remove lots when there is a lost trade.

OrderTypeBuy1: This is to allow Buy orders. Leave it to 0 to allow buy orders. 1 cancels buy orders and allows only sell.

OrderTypeSell1: This is to allow Sell orders. Leave it to 1 to allow sell orders. Leave it to 0 to allow only buy orders.

Lots1: This is to define standard lots and works only when risk management is set to false.

Risk1: This defines the Risk in percentage and works only when RiskManagement is set to true.

Slippage1: This is a security feature to even out trades in fast pacing markets or allow the execution of trades even some pips have moved when signal arrives.

StopLoss1: The original Stop Loss of the trade in pips. This quickly changes as money management jumps in the trade. The value is in pips even if you have a 5 digit broker.

TakeProfit1: The take profit of the trade in pips. The value is in pips even if you have a 5 digit broker.

Expiration1: This is an optional security feature to close trades after input in minutes. 0 cancels this input.

OpenSecondOrder: This input allow the opening of two orders simultaneously and is set to true in aggressive settings. The inputs below it are the same as with the first order and can be changed if you wish other SL or TP or Lots etc for this second order.

TrailingStop: Part of Venus money management. Enters trade with a trailing stop. The input is in pips even in 5 digit brokers.

UseTrailingStop: A Boolean input to allow you to cancel trailing stop

UseCrawlingStop: This is like trailing stop loss but it is time based. If set to true your Venus will try to minimize risk every 10 min that pass from the trading open. It will crawl the stop loss closer to the trade to minimize risk.

LimitedHours: This will limit the trading of Venus. It can be used to set up Venus for scalping mode which is not recommended by us. **HoursFrom & HoursTo** are complementary to this input.

TotalLossLimit: This is a very useful security option. Set your maximum loss tolerance. If it is reached Venus will be automatically deactivated.

TotalWinLimit: This can be set to restrict Venus to a total win after which it is automatically deactivated. It can be used when you wish to withdraw some profits from your account when they are accumulated. Venus is deactivated if it reaches this profit.

MaxSpread: This is a spread filter. It can be used if you wish to use Venus in scalping mode. This scalping mode although possible is not recommended by us.

OpenOrdersLimit: This inputs restricts maximum open orders for Venus.

LimitOrdersPerDay: This Boolean input limits the maximum orders per day. Generally Venus does not trade more than two orders simultaneously with our inputs. Use it if you wish to play with your own inputs. **DayMaxOrderCount** is complementary to this input.
