

Hi Traders!

We've attached the expert advisor file in this folder, so you can easily setup the software on your Metatrader 4 platform. (Note: **This software does NOT work on MT5 or other platforms**)

This software is an expert advisor, and needs to be put in the experts folder, NOT the indicator folder. **The steps below will help you install the software correctly.**

Step 1: Download the .ex4 file shared in this folder. Place it on your desktop/documents.

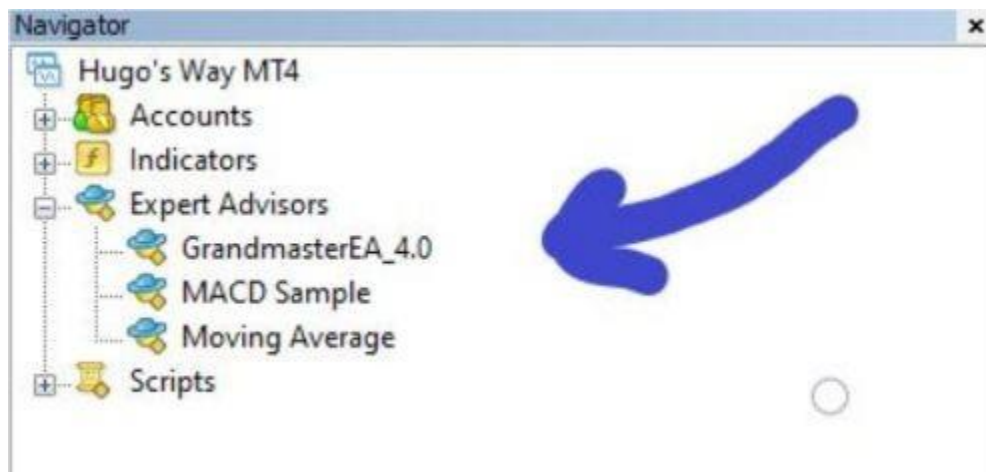

Step 2: Open Metatrader 4, go to File > Open Data Folder > MQL4 > Experts > then paste your software into this folder.

Step 3: Close and restart Metatrader 4

Step 4: Open the 'navigator' section.

You should now see your newly added file in your expert advisors section:

Step 5: Open the MT4 navigator window, go to expert advisors, and drag the tool onto a chart. You'll then be able to toggle parameters as you see fit, and apply the expert advisor to your chart by clicking OK.

You're all set! Your software should be up and running. Happy trading!
