Accumulation, Manipulation, and Distribution (ICT Power of 3 strategy) is a trading strategy designed to help retail traders **identify** the **movements** of **Smart Money**.

This approach divides **market activity** into three stages [**Accumulation, Manipulation, and Distribution**].

Large financial institutions discreetly **accumulate** assets during the accumulation phase without **attracting** attention.

In the manipulation phase, the market **deceives** retail traders into making **incorrect** decisions through misleading price **movements**.

Finally, in the distribution phase, **Smart Money** drives the market in its desired **direction** to **maximize profits**.

To quickly identify and easily utilize the Power of Three strategy, you can use the **Trading Finder (TFLAB)** indicator suite:

The Power of Three Strategy: Accumulation, Manipulation, and Distribution

What are Accumulation, Manipulation, and Distribution?

Accumulation, Manipulation, and Distribution (or **AMD**) are the three key phases of a **potential price movement** in the **ICT trading style**.

Accumulation Phase

The **accumulation** phase starts at the market **opening**, where the price moves within a **narrow range near the opening price**. During this stage, **Smart Money** builds its position quietly.

Although the price appears trapped, it signals **preparation** for a larger movement. In **accumulation**, retail traders typically place buy orders at **horizontal support** and sell orders at **horizontal resistance**.

Manipulation Phase

This phase is designed to **mislead** retail traders. After accumulation, Smart Money drives the market in the **opposite** direction:

- ⚡ On bearish days, retail traders are enticed to **buy**

- ⚡ On bullish days, traders are persuaded to **sell**

This is achieved through a false breakout of the accumulation range:

- ⚡ If the price breaks **above** the range, it triggers sellers' **stop losses** and prompts new buyers to **enter**
- ⚡ If the price breaks **below** the range, it triggers buyers' stop losses and prompts new sellers to enter

Distribution Phase

The AMD strategy's final stage is the **distribution** phase, which reflects the **day's main market movement**.

During this phase, **Smart Money** strengthens its positions after deceiving retail traders and absorbing their **liquidity**.

Then the market will move into the opposite direction of retail traders' expectations.

How to Trade with the ICT Power of 3 Strategy?

To implement the ICT Power of 3 strategy:

1. **Identify Daily Bias:** Predict the overall **price movement** and the **next daily candle** direction
2. **Analyze Smaller Timeframes:** Use **lower timeframes** to identify the **distribution** phase

Power of Three in a Bullish Market

The following steps outline trading with the Power of Three in an uptrend:

1. **Price Consolidation Near Opening Price:** Price stabilizes **near the daily opening price**, and Smart Money builds buy positions.
2. **Sudden Sell-Off:** A quick downward **movement** traps **retail traders** and **targets old lows**.
3. **Retail Traders' Losses:** Retail buyers face **losses** due to a **false breakout**, allowing Smart Money to complete their buy positions at **lower**.
4. **Upward Move Towards Old Highs:** Price moves towards old **highs**, **activating** buy stops and gathering **liquidity**.
5. **Reaching the Day's High:** Smart Money **exits** buy positions and initiates sell trades at the day's high.
6. **Return to Daily Range:** After liquidity is absorbed, the price **returns** to the **daily range**, marking the **end** of the trading day.

How to Trade with Accumulation, Manipulation, and Distribution in ICT style

Power of Three strategy in a Bearish Market

The following steps outline trading with the Power of Three strategy in a downtrend:

1. **Price Consolidation Near Opening Price:** Price stabilizes near the **daily opening price**, and Smart Money builds **sell**;
2. **Sudden Buying Pressure:** A quick **upward movement** traps retail traders and targets **old highs**;

3. **Retail Traders' Losses:** Retail sellers face **losses** due to a **false breakout**, allowing Smart Money to complete their **sell positions** at higher prices;
4. **Downward Move Towards Old Lows:** Price moves towards **old lows, activating sell stops** and gathering liquidity;
5. **Reaching the Day's Low:** Smart Money exits **sell positions** and initiates buy trades at the day's low;
6. **Return to Daily Range:** Once liquidity is **absorbed**, the price returns to the daily range, signaling the conclusion of the trading day.

How to Trade with Accumulation, Manipulation, and Distribution in ICT style
