Fair Value Gap (FVG)

A Fair Value Gap occurs when a significant price move causes an imbalance between two candlesticks, creating a gap that is often revisited. These imbalances signal inefficiencies in supply and demand and present valuable entry points.

Inducement

Inducement refers to deceptive short-term moves engineered by market makers to entice retail traders into poor positions. These actions generate liquidity and often precede price reversals or larger institutional moves.

Balanced Price Range

A Balanced Price Range represents a price movement that creates equilibrium between supply and demand, often seen as a two-sided Fair Value Gap. These zones may indicate potential areas of consolidation or reversal.
