Market makers refer to traders or financial entities such as **central banks**, large commercial companies and banks that significantly impact market trends with their **massive capital**.

Market makers are organizations or individuals with substantial capital who provide liquidity to the market and influence trends

Individuals known as **market makers** are the main players in the market. With their high capital, advanced trading tools, and precise information, they steer the market in their desired direction.

Who Are the Forex Market Players?

From **central banks** to **retail traders** with limited capital, every influential individual in the market is considered a **player**. **Forex market players** include:

- ⚡ **Central Banks**
- ⚡ **Liquidity Providers**
- ⚡ **Large Commercial Companies**
- ⚡ **Speculators (Hedge Funds and Individual Traders)**

Central Banks

Central banks significantly impact currency pair fluctuations by **setting monetary policy** and **controlling liquidity levels**.

For example, a **contractionary monetary policy**, such as **raising interest rates**, reduces liquidity, leading to **currency strengthening**. Traders can identify **differences in monetary policies** between two economies and trade the relevant currency pair.

th

Example of Central Bank Influence in Forex

For instance, to prevent excessive strengthening of the Swiss Franc and a deflationary crisis, the **Swiss National Bank verbally threatened monetary intervention** in the market.

This action, along with **lowering interest rates**, led to the weakening of the Franc in line with the central bank's goal.

The Swiss National Bank (SNB), as a forex market maker, facilitated the weakening of the Franc by lowering interest rates

Large Banks and Liquidity Providers

Large banks and **liquidity providers** (Liquidity Providers) are **market makers** who engage in currency buying and selling as part of market-making activities. Their activities (in terms of orders) can be observed in **COT reports**.

Continuous high-volume trading allows them to earn significant income from the **spread** (difference between the Bid and Ask prices).

in

Electronic Liquidity Providers (ELPs)

Electronic Liquidity Providers use artificial intelligence and complex trading algorithms to inject liquidity into financial markets.

These **liquidity providers** use **automated algorithms** to execute orders in the market; Algorithms continuously scan prices and place orders based on market conditions. **Methods of income generation for electronic liquidity providers:**

- ⚡ **Spread:** The difference between buy and sell prices;

⚡ **Arbitrage between markets and brokers:** Profiting from price differences of an asset across different brokers;

⚡ **Receiving market-making fees from various brokers.**

Large Commercial Companies

Transactions by large commercial companies drive changes in exchange rates. For example, the American company Apple needs to convert Dollars to Yuan to purchase raw materials from China.

In this transaction, Dollars are sold, and Yuan are bought, thereby it reduces the Dollar's value against the Yuan.

Commercial companies As a Forex Market Maker, use Forward Contracts, Options Contracts, Spot Market and Futures Trading to hedge risk.

Hedging operations in commercial companies:

⚡ **Forward Contracts:** Companies enter into **forward contracts** with banks or brokers to trade a specific currency at a predetermined price on a set date;

⚡ **Options Contracts:** Companies can purchase **call or put options** based on their analysis; For example, a U.S. exporter to Europe worried about the euro's depreciation buys a put option to offset potential losses;

- ⚡ **Spot Market Trading:** In the spot market, companies open trades based on their analysis to cover losses;
- ⚡ **Futures Trading:** Companies use **futures contracts** to lock in a price for commodities or currencies.

Speculators (Individual Traders)

This group constitutes about 90% of trading volume and significantly impacts market fluctuations; Their goal is not hedging or commercial trading but identifying market trends through analysis to profit. **Types of individual traders:**

Hedge Funds

Hedge funds are **forex market makers** and are known as "**smart money**"; With their **very high capital**, algorithmic tools, and **advanced technical analysis**, they determine short-term market trends; their order directions can be tracked through **COT reports** on [Tradingster](#) .

Retail Traders

Retail traders use their personal studies on **fundamental analysis**, and technical analysis, to identify market trends. Their large numbers contribute to **increased liquidity**, and their **emotions** [such as **fear and greed**] influence the market in the short term.

Conclusion

Central banks, liquidity providers, commercial companies, banks, hedge funds, and retail traders are the forex market players.

Liquidity providers and **hedge funds** act as market makers, and market trends can be identified by tracking their orders.
