

SHAREHOLDER LETTER

The existing financial system, built over a century ago, is outdated and illequipped for today's digital economy, leading to global inefficiencies and limitations. At Coinbase, we aim to bridge the gap between this aging system and the burgeoning cryptoeconomy in order to bring over 1 billion people into crypto. Although the journey may entail volatility, given the industry's nascent stage - yet enormous potential - we perceive challenges as opportunities, remaining steadfast in our mission to increase global economic freedom.

Q3 was a strong quarter for Coinbase. Amid multi-year low levels of volatility,

we are pleased with our financial results. While we have generated a net loss

Fellow Shareholders,

through Q3, we are on track to deliver meaningful positive Adjusted EBITDA for 2023, reflecting the direction we set at the beginning of the year to be a company that can generate Adjusted EBITDA in all market conditions.

\$USD resources is defined as our cash and cash equivalents, USDC, and custodial account overfunding. Combined with a strong balance sheet with over \$5.5 billion in \$USD resources¹, we are determined to invest in the future and deliver the most trusted products and services that expand onchain utility.

In Q3, we obtained new licenses that enable us to access new markets and deliver new products, continued to drive toward regulatory clarity in the US, and built innovative products and services in the areas of derivatives and layer 2 solutions.

This work is important now because the opportunity is too large to let a tough market distract us. We firmly believe that onchain is the new online. Just like the Internet broke down barriers, democratized access to information, and made knowledge universally available, we believe crypto is doing the same with broader access to financial services and commerce. We believe the onchain companies of today will be the tech giants of tomorrow, and we are positioning Coinbase at the forefront of this technology as a responsible, compliant, trusted, financially strong, and innovative business. These attributes form the core of our competitive advantage, and we are staying focused on building technologies that expand crypto's utility and position Coinbase to win.

Chapter 1: We are building a sustainable business to drive long term growth; in Q3, net loss was \$2 million and we generated positive Adjusted EBITDA for the third consecutive quarter. Total revenue was \$674 million, down 5% Q/Q. Net revenue was \$623 million, down 6% Q/Q. Total operating expenses were \$754 million, down 4% Q/Q, while technology & development, sales & marketing, and general & administrative expenses collectively declined 1% Q/Q to \$654 million. Net loss was \$2 million. Adjusted EBITDA was \$181 million. Our balance sheet remained strong with over \$5.5 billion in \$USD resources which increased \$20 million Q/Q. In Q3, we repurchased \$263 million of our 2031 Senior Notes at an approximately 33% discount to par value or \$177 million in cash.

Chapter 2: Continued focus on product excellence to drive crypto utility and deliver the most trusted products. We exhibited strong product momentum against our three pillar product strategy. For our first pillar, crypto as an asset class, we listed new assets and unified our USD/USDC order books which drove incremental Advanced trading volume and USDC balances on our platform. In support of our Go Broad and Go Deep international strategy, we registered with the Bank of Spain and launched in Canada, expanding our reach. Further, we realized a multi-quarter objective when Coinbase Financial Markets secured regulatory approval from the National Futures Association, a CFTC-designated self-regulatory organization, to operate a Futures Commission Merchant (FCM) and offer eligible US customers access to crypto futures. In support of our second pillar, crypto updating the financial system, we entered into an updated arrangement with Circle to support USDC and help drive long-term success of the stablecoin ecosystem. Our efforts to drive our third pillar, crypto powering the future of the Internet, we introduced Base, our advanced layer 2 (L2) solution. L2 networks can be likened to the transition from dial-up Internet to broadband. Base optimizes speed and efficiency, significantly reduces costs, while granting developers seamless access to the extensive Coinbase ecosystem. Our Onchain Summer launch event saw over 10 million NFTs minted across more than a million transacting wallets on Base and more than \$500 million in assets on the platform.

Chapter 3: We're focused on engaging with regulators & legislators around the world to bring crypto into the regulatory perimeter, including here in the US. Regulatory clarity in the US and abroad continues to be one of our highest priorities. We're seeing global efforts to bring crypto into a regulatory perimeter as 83% of G20 nations are adopting crypto regulations. For example, in Europe, 27 countries have created one unified set of rules for crypto with the Markets in Crypto-Assets Regulation (MiCA) that is due to take effect in 2024. We are proud to have selected Ireland as our MiCA hub. We remain actively involved in advocating for US legislation at both the state and federal level to achieve regulatory clarity. While legislating can be slow and unpredictable, we are still optimistic the US will get this right by embracing innovation, proposing clear rules, and protecting consumers. Our case with the SEC is proceeding and oral arguments for our motion to dismiss are scheduled for January 17, 2024. We are grateful for the Court's careful consideration and have full faith in the legal process.

Chapter 4: Q4'23 Outlook. In October, we generated approximately \$105 million of transaction revenue. We expect Q4 subscription and services revenue to be approximately flat with Q3, and for Q3 transaction expenses as a percentage of net revenue to be in the midteens. We anticipate Q4 technology & development and general & administrative expenses to be \$525-\$575 million, driven by lower stock-based compensation as our expense recognition timing is not linear. We expect sales & marketing expenses to be \$85-\$95 million. Lastly, we anticipate that we will generate meaningful positive Adjusted EBITDA in full-year 2023, revised from our prior goal of improving full-year 2023 Adjusted EBITDA in absolute dollar terms versus full-year 2022.

For a reconciliation of net loss to Adjusted EBITDA used in this shareholder letter, please refer to the reconciliation table in the section titled "Reconciliation of Net Loss to Adjusted EBITDA," following the financial statements included at the end of this shareholder letter.

Chapter 1

We are building a sustainable business to drive long term growth; in Q3, net loss was \$2 million and we generated positive Adjusted EBITDA for the third consecutive quarter.

Total revenue was \$674 million, down 5% Q/Q. Net revenue was \$623 million, down 6% Q/Q. Other revenue was \$51 million, up 13% Q/Q, driven primarily by higher interest rates earned on corporate cash. Total operating expenses were \$754 million, down 4% Q/Q, while technology & development, sales & marketing, and general & administrative expenses collectively declined 1% Q/Q to \$654 million. Net loss was \$2 million. Adjusted EBITDA was \$181 million. Our balance sheet remained strong with over \$5.5 billion in \$USD resources which increased \$20 million Q/Q. In Q3, we repurchased \$263 million of our 2031 Senior Notes at an approximately 33% discount to par value or \$177 million in cash.

Total Revenue (\$M)

TOTAL REVENUE	Q3′22	Q4′22	Q1′23	Q2′23	Q3′23
Tranaction Revenue					
Consumer, net	346.1	308.8	352.4	310.0	274.5
Institutional, net	19.8	13.4	22.3	17.1	14.1

Total Revenue	590.3	629.1	772.5	707.9	674.1

- 1 Stablecoin revenue is derived from our arrangement with the issuer of USDC. Prior to Q3, stablecoin revenue was included within interest income.
- ² Interest income represents interest earned on customer custodial funds as well as loans.

Note: Figures presented may not sum precisely due to rounding

Transaction Revenue

Overall crypto market cap declined 9% Q/Q to \$1.1 trillion when comparing the end of Q3 to the end of Q2, and the average crypto market cap declined 3% over the same time frame. The price of BTC, which accounts for roughly half of crypto market cap, declined 12% when comparing the end of Q3 to the end of Q2, but increased 63% year-to-date through the end of Q3. In addition, crypto asset volatility², another driver of revenue, continued to decline in Q3 and reached the lowest level we have measured since 2016. This macro backdrop contributed to global spot market trading volumes declining 24% Q/Q in Q3.

² Crypto asset volatility represents our internal measure of crypto volatility in the market relative to prior periods. The volatility is based on intraday returns of a volume-weighted basket of all assets listed on our trading platform. These returns are used to compute the basket's intraday volatility which is then scaled to a daily window. These daily volatility values are then averaged over the applicable time period as needed.

Trading volume represents the total U.S. dollar equivalent value of spot matched trades transacted between a buyer and seller through our platform during the period of measurement. Q3 total transaction revenue was \$289 million, down 12% Q/Q. Transaction revenue was driven by a 17% Q/Q decline in total trading volume³, partially offset by higher realized fees resulting from the mix of trading activity on our platform in the quarter.

Consumer Transaction Revenue

Consumer transaction revenue was \$275 million in Q3, down 11% Q/Q. Q3 consumer trading volume was \$11 billion, down 21%, and better than the US spot market. Similar to last quarter, within consumer, advanced trading volume declined more than simple trading volume, which we believe was driven by the low volatility environment. The mix in trading volume on our platform resulted in a higher blended average fee rate in Q3 as compared to Q2.

Institutional Transaction Revenue

Institutional transaction revenue was \$14 million in Q3, down 18% Q/Q. Institutional trading volume was \$65 billion, down 17% Q/Q, also better than the US spot market. The institutional trading volume decline was primarily driven by lower Markets volume, which largely consists of market maker volume on our platform. During Q3, USDT volume was elevated temporarily across the entire industry, including on Coinbase, largely due to de-pegging events.

TRADING VOLUME (\$B)	Q3′22	Q4'22	Q1'23	Q2'23	Q3′2
Consumer	26	20	21	14	1
Institutional	133	125	124	78	6
Total	159	145	145	92	70
TRADING VOLUME (% OF TOTAL)	Q3′22	Q4'22	Q1'23	Q2'23	Q3′2

Total	100%	100%	100%	100%	100%
TRANSACTION REVENUE (% OF TOTAL)	Q3′22	Q4'22	Q1'23	Q2'23	Q3′2
Bitcoin	31%	35%	36%	39%	37%
Ethereum	24%	19%	18%	21%	18%
Other crypto assets	45%	46%	46%	39%	46%
Total	100%	100%	100%	100%	100%

Below reporting threshold of 10% of total trading volume

Note: Figures presented may not sum precisely due to rounding

Subscription & Services Revenue

Q3 subscription and services revenue was \$334 million, largely flat Q/Q. We saw increases of native units in custody, an increase in staked balances, and growth in USDC on our platform.

Stablecoin revenues were \$172 million, up 14% Q/Q. Prior to Q3, stablecoin revenue was included in interest income. Stablecoin revenue is income earned on USDC reserves under our updated arrangement with Circle. The primary driver of the Q/Q increase was higher interest rates. We ended Q3 with approximately \$2.5 billion in on-platform USDC balances, up from \$1.8 billion at the end of Q2.

Blockchain rewards revenue declined 15% Q/Q to \$74 million and was primarily driven by two factors. First, lower rewards rates offered by protocols, and second, lower Q/Q crypto asset prices. Our largest staked balance was ETH, which was \$7.1 billion as of 9/30.

Interest income was \$39 million, down 21% Q/Q. Interest income represents interest earned on customer custodial funds and loans. The Q/Q decline was driven primarily by lower average daily customer fiat balances in Q3 as compared to Q2. As a reminder, customer fiat balances vary on a quarter to quarter basis depending on customer activity and we do not manage our business to grow these balances.

Custodial fee revenue was \$16 million, down 7% Q/Q. The decline was primarily driven by lower blended average fees as well as lower average crypto prices in Q3 compared to Q2. As shared last quarter, we customize pricing on the Coinbase Prime platform based on customer needs between trading, custody, financing, and other products. As a result, we anticipate that our product-specific fees will vary from quarter to quarter depending on the types of customers onboarded and using the Coinbase Prime suite of products in any particular period.

Other subscription and services revenue was \$32 million, up 10% Q/Q. The increase was driven by higher Coinbase One revenue, where we continued to see higher paid subscribers, as well as growth in our Prime Financing product.

Expenses

In Q3, we continued to operate with a focus on cost and efficiency. Q3 total operating expenses were \$754 million, down 4% Q/Q. Within total operating expenses, technology & development, sales & marketing, and general & administrative expenses collectively declined 1% Q/Q to \$654 million and were at the low end of our Q3 outlook range largely driven by a shift in timing of certain sales & marketing and legal-related expenses from Q3 to Q4.

Note: Figures presented may not sum precisely due to rounding

Operating Expenses (\$M, except full-time employees)

OPERATING EXPENSES	Q3′22	Q4'22	Q1′23	Q2′23	Q3′23
Transaction expense	101.9	83.0	96.4	108.2	90.6
% of net revenue	18%	14%	13%	16%	15%
Sales and marketing	75.9	93.1	64.0	83.9	78.2
% of net revenue	13%	15%	9%	13%	13%
Technology and development	556.3	590.1	358.0	320.7	322.8
General and administrative	339.2	377.7	248.8	259.0	252.6
Restructuring	(1.2)	(0.5)	144.5	(1.0)	(0.9)
Crypto asset impairment, net ¹	12.2	67.2	18.0	(8.1)	7.2
Other operating expenses, net	62.6	(26.6)	(33.2)	18.9	3.5
Total operating expenses	1,146.8	1,184.0	896.4	781.5	754.0
Full-time employees (end of quarter)	4,706	4,510	3,535	3,406	3,427

¹ Crypto asset impairment, net represents gross impairments recorded on crypto assets held, net of subsequent realized gains on the sale and disposal of previously impaired crypto assets held. Prior to Q3 this was included within Other operating expense, net.

Q3 transaction expenses were \$91 million, down 16% Q/Q. The primary driver of the decrease in absolute dollars was lower staking rewards distributed to customers in connection with the decline in blockchain rewards revenue, as well as lower miner fees associated with Ethereum network activity. Q3 transaction expenses as a percentage of net revenue were 15% and in-line with our outlook.

Sales and marketing expenses were \$78 million, down 7% Q/Q. The decrease was driven by lower seasonal NBA-related spend, partially offset by higher USDC reward payouts due to higher onplatform balances. Sales and marketing spend was slightly lower than our outlook range due to the shift in timing of certain expenses from Q3 to Q4.

Technology and development expenses were \$323 million, up 1% Q/Q, as expectedly higher stock-based compensation expenses were offset by efficiencies in our infrastructure spending.

General and administrative expenses were \$253 million, down 2% Q/Q. The sequential decline was driven by elevated rent expenses in Q2 related to a lease termination that did not reoccur in Q3, as well as a shift in timing of certain legal related expenses from Q3 to Q4. These were partially offset by expectedly higher stock-based compensation expenses.

Stock-based compensation was \$218 million and in-line with our outlook.

Other income was \$135 million, primarily driven by an \$82 million gain related to the extinguishment of \$263 million of our 2031 Senior Notes as well as a gain related to strategic investments.

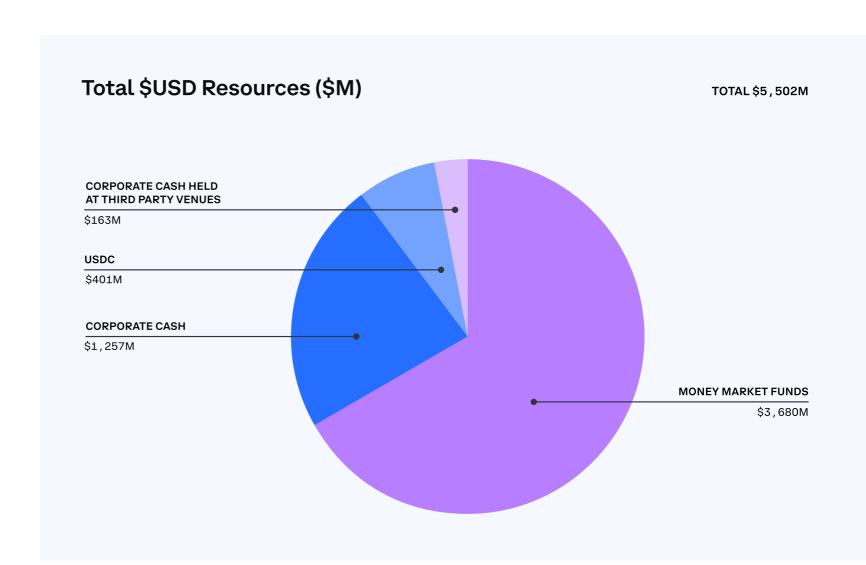

Q3 income tax expense was \$37 million, resulting in an effective tax rate of 107%, which is higher than the US statutory rate primarily due to an adjustment to the estimated annual effective tax rate in the quarter and an increase to a valuation allowance on deferred tax assets. For the nine months ended September 30, 2023, our effective tax rate was 15% and lower than the US statutory rate of 21% primarily due to non-deductible stock-based compensation and US taxes on foreign earnings, offset by a partial release of a valuation allowance on deferred tax assets.

Share Count

Our Q3 fully diluted share count was 281.0 million, down slightly Q/Q. This includes 239.2 million common shares and 41.8 million dilutive securities (including 3.7 million associated with our 2026 Convertible Notes which have a conversion price of \$370.45).

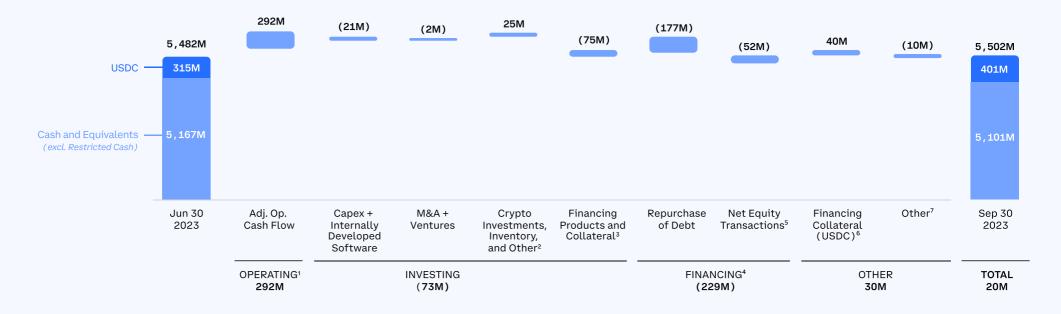

Capital and Liquidity

We ended Q3 with \$5.5 billion in total available \$USD resources which we define as cash and cash equivalents, USDC, and custodial account overfunding. This represents an increase of \$20 million Q/Q.

Note: Figures presented may not sum precisely due to rounding

2023 Q2 to Q3 Change in \$USD Resources (\$M)

- ¹ Cash flows due to operating activities, adjusted for the net change in USDC and deposits in-transit
- ² Crypto disposals and purchases across our crypto investment portfolio and used for operating purposes
- ³ Financing products and collateral includes Prime Financing and Retail Borrow plus fiat assets pledged as collateral
- ⁴ Cash flows used in financing activities, adjusted for the net change in customer custodial cash liabilities
- ⁵ Net cash paid for taxes related to net share settlement of equity awards, offset by cash received for the issuance of common stock upon exercises of stock options, net of repurchases and proceeds for the employee stock purchase plan
- ⁶ Represents net inflows of USDC relating to financing and investing collateral
- Other includes the effect of foreign exchange on corporate cash, offset by transfers from restricted cash and net inflows of USDC for investing and financing activities and working capital

In addition to our \$USD resources, we also consider our crypto assets held as investments as other unencumbered and liquid resources available to us. The fair market value of our crypto assets held as investments was \$572 million as of 9/30 and had an impaired cost basis of \$311 million.

Credit and Counterparty Risk

We maintained our longstanding commitment to operational and risk excellence throughout Q3. At the end of Q3, we had \$605 million in total credit and counterparty risk (excluding banks), stemming from \$362 million loans to customers, \$194 million held at third party venues (including \$163 million in cash), and \$50 million in collateral posted.

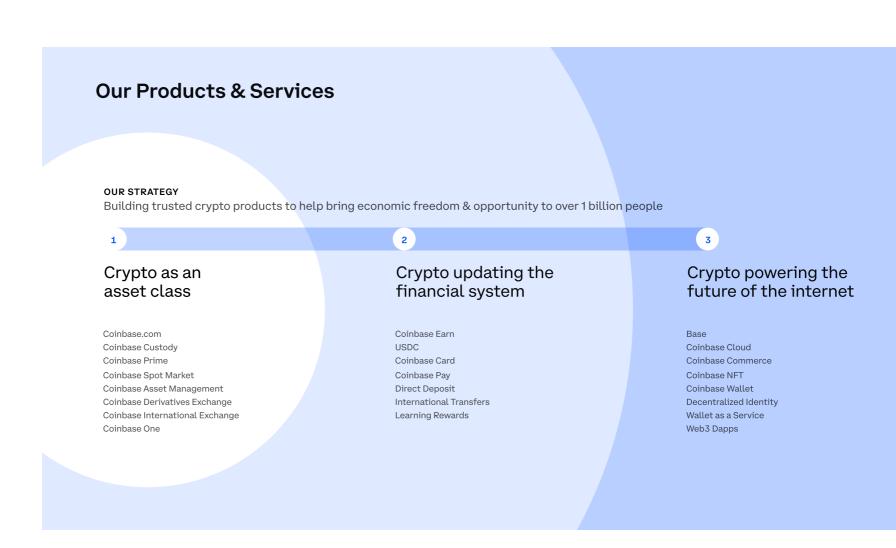

Chapter 2

Continued focus on product excellence to drive crypto utility and deliver the most trusted products.

Our goal at Coinbase remains to build the best products and services that will bridge the divide between the traditional financial system and the cryptoeconomy. Onchain technology is the upgrade the financial system desperately needs, and the opportunity in front of us is as great as that of the last technological revolution, the Internet. That is why we feel that onchain is the new online and why we continue to build towards increasing economic freedom for over 1 billion people globally through crypto.

Nearly <u>9-in-10</u> Americans believe it is time to update the financial system, which was built over 100 years ago. Crypto offers a faster, more efficient, and more equitable evolution of the financial system. As the crypto ecosystem evolves, it will play an essential role in building the fintech apps of the future, both in the form of underlying blockchain technology powering infrastructure, and front-end, consumer-facing applications.

To date, crypto has primarily been used as a store of value and for trading purposes, but we see much broader and powerful applications in the years ahead. Accordingly, our product strategy is mapped against the three phases of crypto utility. First, crypto as an asset class, which centers around the core trading and store of value use case. Second, crypto updating the financial system, which centers around stablecoins, staking services, and more. And lastly, crypto powering the future of the Internet, which centers around a wide variety of applications - from decentralized services to cloud services and commerce.

Across these three pillars, Q3 has been a strong quarter of execution. We've obtained new licenses that enable us to access new markets, continued to drive toward regulatory clarity for crypto, and built innovative products and services that expand the utility of crypto and best position Coinbase for the future.

To support crypto as an asset class, we continued to strengthen our platform to bring the best and most trusted trading products to our customers.

- Added assets and payment rails. We continue to focus on maximizing choice and access for our customers by adding more assets and expanding payment options to access crypto and reduce friction in our purchase flow. In Q3, we added 7 new assets across 5 networks, including XRP in July and two day 1 listings. We continue to expand access for our customers to use PayPal and Open Banking (Easy Bank Transfers) across Europe and the UK, while Interac rolled out to 100% of Canadian users in Q3.
- Made improvements to Advanced Trade. We unified USD-USDC order books which drove both incremental trading volume and USDC to be held on our platform. With unified order books, international users now have broader access to the USD-USDC trading pairs and can also now earn rewards on USDC balances. Additionally, we've made a variety of improvements to enhance the customer experience, including launching a new Portfolio tab and other app enhancements.
- International expansion. Given our longstanding focus on compliance and regulation, we obtain relevant licenses and regulations where available and required so that we can best serve our customers. Many countries around the world have created regulatory frameworks that have allowed us to continue to make progress against our Go Broad Go Deep international strategy. In Q3, we launched in Canada where we hired local leadership and announced new payment rails to reduce friction and expand access to crypto. Additionally, we registered as a cryptocurrency exchange and custodian wallet provider with the Bank of Spain. This registration will allow Coinbase to offer our full suite of products and services to retail and institutional users in Spain, all in compliance with the national legal framework.

The derivatives market for crypto represents 75% of all trading volume, with the majority of this volume going through unregulated exchanges. We believe there is a large opportunity for a trusted, regulated player to provide a safe and secure way to engage with regulated derivatives products. In Q3, Coinbase and Coinbase Financial Markets made good progress in making derivative products available to customers globally:

- Continued to expand access to derivatives both in the US...In Q3, Coinbase Financial Markets,
 Inc. secured regulatory approval from the National Futures Association, a CFTC-designated
 self-regulatory organization, to operate a Futures Commission Merchant (FCM) and offer
 eligible US customers access to crypto futures. Coinbase Financial Markets will now be the
 first crypto-native leader to offer access to regulated, leveraged, and cash-settled crypto
 futures, and we just launched our regulated futures product offering to eligible US
 customers.
- ...As well as outside the US. At the same time, while we are still in the early days of investing to build liquidity and grow participation, we experienced good progress with Coinbase International Exchange. In Q3, we more than doubled the number of onboarded institutions to over 100 and the total notional volume traded was approximately \$10 billion, and we grew our market share considerably off of a low base. And just recently, we expanded our perpetual futures offering to retail customers in certain jurisdictions via Advanced Trade.
- **Prime Financing sees continued adoption.** In Q3, we improved the user experience in Prime, expanded access with financing available on over 60 assets, covering over 90% of Coinbase Prime average daily trading volume, and have seen balance growth and steady institutional adoption.

We're also continuing to make progress in crypto, updating the financial system. Our current financial system hasn't been updated in decades and is showing its age. Crypto is the faster, cheaper, borderless, decentralized, and transparent upgrade that the system desperately needs. Investments in assets like stablecoins lay the foundation for more people to easily engage with assets onchain.

• Ushering in the next chapter for USDC. We are optimistic on stablecoins as they represent an important stepping stone to getting people access to better financial services and updating the financial system. Stablecoins match the benefits of crypto - instant settlement, borderless, available to anyone, free conversion - without price volatility. In Q3, we entered into an updated arrangement with Circle, which results in even greater strategic alignment on the long-term success of the stablecoin ecosystem.. As part of the updated arrangement, operations and governance will be streamlined and enhance the direct accountability of Circle as the issuer of USDC. USDC has launched on 6 new blockchains since August. Pursuant to this arrangement, Coinbase will earn a pro rata portion of income earned on the USDC reserves based on the amount of USDC held on each respective party's platform, and will now equally share in the income earned from the distribution and usage of USDC after certain expenses.

Which brings us to crypto products that are powering the future of the Internet. Onchain is the new online - with blockchain serving as the foundational technology stack on which decentralized applications are being built and will continue to grow well into the future. Coinbase is building the key network improvements that make building this future faster, cheaper and more efficient.

- Base and Onchain Summer highlights. In Q3, we introduced Base, our advanced layer 2 (L2) solution. L2 networks are designed to address the inefficiencies of layer 1 (L1) networks which can be slow, inefficient and expensive to use. The transition from L1 networks to L2 networks can be likened to the transition from dial-up Internet to broadband. Base optimizes speed and efficiency, significantly reducing costs, while granting developers seamless access to the extensive Coinbase ecosystem. Having transitioned Base to Mainnet in August, which means it is now available to everyone, and even though it's still early days, we're seeing promising traction.
- To celebrate the launch, we catalyzed an onchain movement this summer for developers and the crypto community called Onchain Summer. During the campaign, we saw over 10 million NFTs minted across more than a million transacting wallets on Base. This momentum helped drive rapid growth of Base, including more than \$500 million in assets on the platform. While early, we are encouraged by the early utility of Base and are optimistic about the role L2s will play not only for Coinbase but for the growth and development of the entire cryptoeconomy.

Chapter 3

We're focused on engaging with regulators & legislators around the world to bring crypto into the regulatory perimeter, including here in the US.

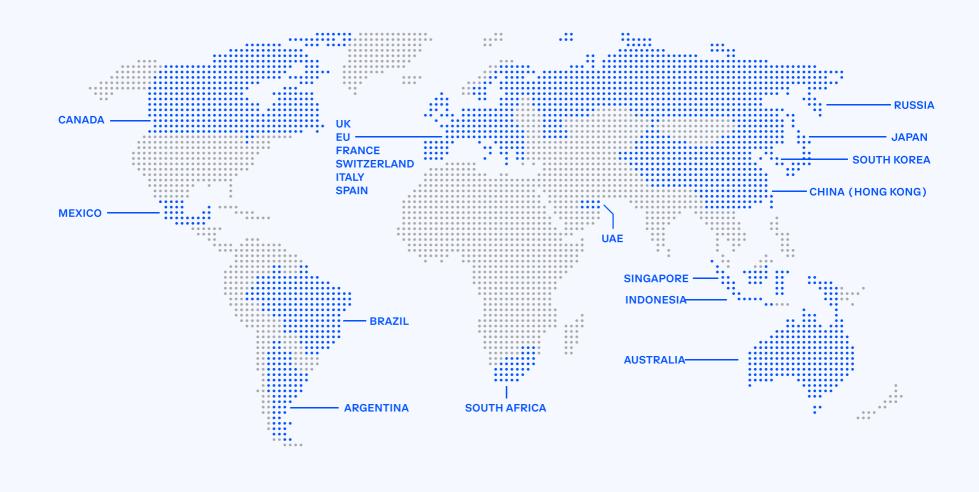

We are actively involved in driving regulatory clarity in the US:

- We are actively involved in advocating for US legislation at both the state and federal level to create regulatory clarity. While legislating can be slow and unpredictable, we are still optimistic the US will get this right by embracing innovation, proposing clear rules, and protecting consumers. We are particularly pleased with the work of the Commodities Future Trading Commission and the New York Department of Financial Services, both of which have worked to create tailored approaches to digital assets.
- American citizens deserve the consumer protections that come with a clear rulebook. We estimate 52 million Americans currently own crypto. To put that into context, that is more than the number of Americans that own electric vehicles and more than all collective members of US unions. And, importantly, crypto owners are becoming an increasingly larger voter base, and they are using their voice to advocate. For example, crypto advocates have sent record levels of comment letters to the IRS with regards to the proposed broker reporting rules. Crypto owners and market participants are calling for a level playing field with analogous reporting regimes and calling out the need for privacy in addition to tax compliance.
- Crypto advocates know crypto is part of the solution when it comes to fixing our antiquated and cumbersome financial system. And almost no one is happy with today's financial system. Only 9% of those surveyed say they are satisfied with the US financial system and only 22% think it's better than that of any other country. This is especially true for younger generations. Nearly two in five younger people (38%) say crypto and blockchain can increase economic opportunities for them in ways traditional finance can't.
- The American people are embracing crypto and asking their representatives to create common sense clear rules. To aid in this mission Coinbase was proud to help launch an independent movement known as Stand with Crypto that now has more than 100,000 advocates and unique tools that help connect advocates directly with their representatives to make their voices heard. Stand with Crypto is a grassroots movement that will change the political and policy landscape in the US for the better.

We are moving forward in markets where there are clear regulations:

• While the US continues to struggle to keep pace, the rest of the world has made great strides in embracing crypto and onchain technology with clear legislation. We're seeing global efforts to bring crypto into regulatory scopes as 83% of G20 nations are adopting crypto regulations. In Europe, 27 countries are standing together to create one unified set of rules for crypto on MiCA. Something the US desperately needs. In response to this groundbreaking regulation, Coinbase moved quickly and recently announced that Ireland will be our MiCA hub. We continue to work with regulators around the world on laws for cryptocurrencies and act quickly to embrace new regulation when it is developed.

83% of the G20 and major financial hubs have either passed national crypto legislation or have crypto regulations in place.

Our case with the SEC continues to progress:

The SEC sued Coinbase on June 6 and the case is proceeding according to the Court's schedule. We filed a motion for judgment on the pleadings that would dismiss the entire case on August 4. Our core argument is simple – we do not offer "investment contracts" as that term has been construed by decades of Supreme Court and other binding precedent. The Court has set oral argument on our motion for January 17, 2024. We are grateful for the Court's careful consideration and have full faith in the legal process.

Chapter 4Outlook

Our Q4 outlook reflects a continuation of trends that we experienced in Q3. Specifically:

Transaction Revenue

• We generated approximately \$105 million of total transaction revenue in October, though we urge caution in extrapolating these results.

Subscription and Services Revenue

• We expect Q4 subscription and services revenue to be approximately flat compared to Q3. This assumes that there are no material changes to crypto and fiat assets that customers store on our platform, crypto asset prices, crypto market conditions or the regulatory environment compared to the month of October.

METRIC	OUTLOOK
Subscription and Services Revenue	Approximately flat compared to Q3
Transaction Expenses	Mid teens as a % of net revenue Dependent on revenue mix
Technology and Development + General and Administrative Expenses	\$525 million - \$575 million Including ~\$150 million in stock-based compensation
Sales and Marketing Expenses	\$85 million - \$95 million

Expenses

- We expect technology & development and general & administrative expenses to decrease Q/Q primarily due to our stock-based compensation recognition being non-linear as indicated last quarter. This will be partially offset by a modest increase in legal, compliance and political expense, some of which was delayed from Q3 to Q4.
- We expect sales and marketing expenses to increase Q/Q as a result of seasonally-higher spend associated with our NBA partnership, increased USDC customer reward payouts driven by higher on-platform balances and certain marketing and public policy investments that we delayed from Q3 to Q4. These increases are partially offset by lower stock-based compensation Q/Q.

Looking Ahead

Crypto remains volatile, as evidenced by ongoing uncertainty in the regulatory environment. While we can't predict what will happen next, for 2023 we anticipate meaningful positive Adjusted EBITDA. This is an improvement from our previously-communicated goal of improving Adjusted EBITDA in absolute dollar terms versus full-year 2022.

Webcast Information

We will host a question and answer session to discuss the results for the third quarter 2023 on November 2, 2023 at 2:30 pm PT. The live webcast of the call will be available on the Investor Relations section of Coinbase's website at https://investor.coinbase.com. A replay of the call as well as a transcript will be available on the same website.

Forward Looking Statements

This communication contains forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. All statements other than statements of historical fact are forward-looking statements. These statements include, but are not limited to, statements regarding our future operating results and financial position, including for the fourth quarter and the full-year ending December 31, 2023, anticipated future expenses and investments; expectations relating to certain of our key financial and operating metrics; our business strategy and plans; expectations relating to legal and regulatory proceedings; expectations relating to our industry, the regulatory environment, market conditions, trends and growth; expectations relating to customer behaviors and preferences; our ability to fund our operations through periods of macroeconomic uncertainty and significant volatility in the cryptoeconomy; our market position; potential market opportunities; and our objectives for future operations. The words "believe," "may," "will," "estimate," "potential," "continue," "anticipate," "intend," "expect," "could," "would," "project," "plan," "target," and similar expressions are intended to identify forward-looking statements. Forward-looking statements are based on management's expectations, assumptions, and projections based on information available at the time the statements were made. These forward-looking statements are subject to a number of risks, uncertainties, and assumptions, including, among others: our ability to successfully execute our business and growth strategy and generate future profitability; market acceptance of our products and services; our ability to further penetrate our existing customer base and expand our customer base; our ability to develop new products and services; our ability to expand internationally; the success of any acquisitions or investments that we make; the effects of increased competition in our markets; our ability to stay in compliance with applicable laws and regulations; stock price fluctuations; market conditions across the cryptoeconomy, including crypto asset price volatility; and general market, political and economic conditions, including interest rate fluctuations, inflation and instability in the global banking system. It is not possible for our management to predict all risks, nor can we assess the impact of all factors on our business or the extent to which any factor, or combination of factors, may cause actual results to differ materially from those contained in any forward-looking statements we may make. In light of these risks, uncertainties, and assumptions, our actual results could differ materially and adversely from those anticipated or implied in the forward-looking statements. Further information on risks that could cause actual results to differ materially from forecasted results are, or will be included, in our filings we make with the Securities and Exchange Commission (SEC) from time to time, including our Annual Report on Form 10-K for the year ended December

31, 2022 filed with the SEC on February 21, 2023, our Quarterly Report on Form 10-Q for the quarter ended March 31, 2023 filed with the SEC on May 4, 2023, our Quarterly Report on Form 10-Q for the quarter ended June 30, 2023 filed with the SEC on August 3, 2023 and our Quarterly Report on Form 10-Q for the quarter ended September 30, 2023 filed with the SEC on November 2, 2023. Except as required by law, we assume no obligation to update these forward-looking statements, or to update the reasons if actual results differ materially from those anticipated in the forward-looking statements.

Non-GAAP Financial Measure

To supplement our condensed consolidated financial statements, which are prepared and presented in accordance with U.S. generally accepted accounting principles (GAAP), we use the following non-GAAP financial measures: Adjusted EBITDA. The presentation of this financial measure is not intended to be considered in isolation or as a substitute for, or superior to, financial information prepared and presented in accordance with GAAP. Investors are cautioned that there are material limitations associated with the use of non-GAAP financial measures as an analytical tool. In addition, other companies, including companies in our industry, may calculate this non-GAAP measure differently or may use other measures to evaluate their performance, all of which could reduce the usefulness of our disclosure of our non-GAAP financial measure as a tool for comparison. We compensate for these limitations by providing specific information regarding the GAAP amounts excluded from this non-GAAP financial measure. We believe this non-GAAP financial measure provides investors with useful supplemental information about the financial performance of our business, enables comparison of financial results between periods where certain items may vary independent of business performance, and allows for greater transparency with respect to key metrics used by management in operating our business.

Adjusted EBITDA

We use Adjusted EBITDA to evaluate our ongoing operations and for internal planning and forecasting purposes. We believe that Adjusted EBITDA may be helpful to investors because it provides consistency and comparability with past financial performance. There are a number of limitations related to Adjusted EBITDA rather than net income (loss), which is the nearest GAAP equivalent of Adjusted EBITDA. Some of these limitations are Adjusted EBITDA excludes:

- provision for (benefit from) income taxes;
- depreciation and intangible assets amortization expense and, although these are non-cash expenses, the assets being depreciated and amortized may have to be replaced in the future;
- interest expense, or the cash requirements necessary to service interest or principal payments on our debt, which reduces cash available to us;
- the impact of crypto asset borrowing costs, a non-cash expense, which is similar in nature to interest expense on our crypto asset borrowings, which has been recurring, and may in the future recur;
- stock-based compensation expense, which has been, and will continue to be for the foreseeable future, a significant recurring expense for our business and an important part of our compensation strategy;
- crypto asset impairment, net, represents impairment on crypto assets still held and is a noncash expense, which has been recurring, and may in the future recur, although the crypto assets impaired may be sold in the future at a price at or higher than the price the assets have been impaired to;
- impairment on investments, net, a non-cash expense, which has been recurring, and may in the future recur, although the impaired investments may be sold in the future at a price lower, at or higher than the price the assets have been impaired to;
- impairment on property and equipment and intangible assets are infrequent in nature and are non-cash adjustments;
- the impact of restructuring, which is infrequent and not related to normal operations but impacted our results in 2022 and 2023;

- gain on extinguishment of long-term debt due to repurchases prior to maturity, a non-cash adjustment, which has been recurring, and may in the future recur;
- the impact of unrealized foreign exchange gains or losses and fair value adjustments on foreign exchange derivatives for hedging activities, non-cash adjustments, which have been recurring, and may in the future recur;
- the impact of fair value gain or loss on derivatives, a non-cash expense, which has been recurring, and may in the future recur;
- non-recurring legal reserves and related costs, which reduces cash available to us and
- a non-recurring fee and write-off related to an early lease termination, a non-recurring accrual for value-added tax related to our Irish operations, and non-cash unrealized gains or losses on contingent consideration, which we have consolidated into the line item "other adjustments" because they are not material individually.

We calculate Adjusted EBITDA as net loss or income, adjusted to exclude provision for or benefit from income taxes, depreciation and amortization, interest expense, crypto asset borrowing costs, stock-based compensation expense, crypto asset impairment, net, loss or gain on investments, net, other impairment, restructuring, gain on extinguishment of long-term debt, net, change in unrealized foreign exchange, fair value gain or loss on derivatives, non-recurring legal reserves and related costs, and other adjustments, net.

We have not reconciled our Adjusted EBITDA outlook to GAAP net loss because certain items that impact GAAP net loss are uncertain or out of our control and cannot be reasonably predicted. For example, stock-based compensation is impacted by the future fair market value of our common stock and other factors, all of which are difficult to predict, subject to frequent change, or not within our control. The actual amount of these expenses during 2023 will have a significant impact on our future GAAP financial results. Accordingly, a reconciliation of Adjusted EBITDA outlook to GAAP net loss is not available without unreasonable effort.

For more information on our non-GAAP financial measures and a reconciliation of GAAP to non-GAAP measures, please see the "Reconciliation of GAAP to Non-GAAP Results" table in this shareholder letter.
